Why centralized maintenance system is important?

- ✓ Standardize maintenance processes.
- ✓ Real-time work monitoring.
- ✓ Enhance operational productivity.
- ✓ QR code implementation for easy identification
- ✓ Reporting & data analysis
- ✓ Track historical equipment's data
- ✓ Reduce equipment downtime & unplanned shutdowns

SMART ASSET Management Solutions (SAMs)

SAMs is a modern Computer Facility Management software that aims to maximize asset performance and reduce operational costs in facility management.

Ultimately, SAMs is an integrated web application with RFID Human or People Tracking System and CRFSS will streamline the process of creating and managing work orders as soon as getting real-time feedback from customers.

The system provides a structured approach to organize and manage the process through any browser and mobile application.

"We are unique and advance in managing assets and facilities"

THE LEADER OF ULTRA-HIGH PERFORMANCE CONCRETE (UHPC)

ABOUT US

DURA[®] Technology Sdn. Bhd. was founded in Malaysia on January 2006. DURA[®] aims to lead the development of technologies in the building and construction industry of Malaysia and has been awarded with pioneer status on its Ultra-High Performance Concrete (UHPC).

UHPC was patented by DURA[®] and known as DURA[®]. DURA[®] with its high durability, strength and reliable ductility is exclusively used to control cost efficiency. DURA[®] provides excellent resistance against blasting, high impact loading and abrasion, thus, prolonging wear and tear while eliminating the usage of conventional steel reinforced bars.

ADVANTAGES

Ultra-high performance concrete (UHPC) has several advantages over conventional concrete including improved strength and ductility, reduced permeability, better durability, increased thermal and fire resistance, improved fatigue performance and superior workability. It is also more cost-effective due to its ability to be molded into complicated shapes, while allowing easier and accelerated construction. Additionally, it has a smaller environmental footprint due to reduced concrete usage.

Immediate Cost Saving

Increase Service Life

Minimal Maintenance

Life-Cycle Cost Saving

Reduce Construction Time & Risk

Reduce Global Warming Potential

Reduce Material Usage

Sustainable Construction

DURA[®] APPLICATIONS OF UHPC TECHNOLOGY

- ✓ BRIDGE
- ✓ CIVIL CONSTRUCTION
- ✓ AIRPORT
- ✓ POWER PLANT
- ✓ HARBOR
- ✓ ARCHITECTURE
- ✓ MACHINE BEDS
- ✓ FLOORING, PAVEMENT & ROAD
- ✓ OFFSHORE
- ✓ ONSHORE
- ✓ EARTHQUAKE
- ✓ RETAINING WALL STRUCTURE
- ✓ DISPOSAL
- ✓ REGENERATIVE ENERGY PRODUCTION
- ✓ UHPC PRECAST AND TILT-UP SYSTEM
- ✓ UHPC CORROSION PROTECTION
- ✓ WEAR PROTECTION
- ✓ VAULTS, ATMs, TERROR
- ✓ MILITARY

OPERATING 7 MANUFACTURING PLANTS

Company Background and Our Profile:

Experienced since early 2006 in civil and structural engineering works, we believe we are the pioneer and are in the path to be labelled as formidable force in the construction industry as our services not merely confine to our expertise in project engineering but also to provide exceptional design ideas, maintenance services, mechanical and electrical necessity.

Our praised completed construction works have the quality of international standard which includes various construction projects ranging from infrastructure, industrial, commercial and residential (landed and high rise), amongst others include big scale theme park, hotels, shop lots, offices, factories, warehouse, governmental buildings, international school and university.

Our Philosophy, Mission and Vision:

Our born bone base philosophy and working culture has always been and still is "If there's job to be done, finish it well". We always conscientious towards our vision of **"SOUGHT FOR OUR KNOWLEDGE, SELECTED FOR OUR PERFORMANCE"** in the construction industry.

We have completed many projects over the years to the satisfaction of our clientele even for job that require the most stringent standards. We strive to prove that we are able to provide quality value engineering with assurance of strong and firm financial reliability and abilities to achieve balance in aesthetics and cost efficiency with timely delivery capabilities.

Outstanding Achievement:

We hold-fast to the criteria of 'time is money' in ensuring the successful completion of construction and development projects. We possessed, amongst others, a strong skilled workforce which we constantly trained to improve their skills. We pay attention to well management and safety at construction sites all the time to achieve expeditious completion of construction projects without hindrance.

We were awarded with the 'ASEAN Most Recognized Brand in Integrated Building System and Construction Excellent Award' in year 2016. This 'Excellent Award' is truly a recognition of our performance in the industry. We are confident and able to assure our clientele that their decision of us is not regrettable. We also humbly express our appreciation to our formal, existing and future clientele in proving that we are able to continue to be the pioneer in the construction industry.

ABOUT US

In 2003, our company embarked on its journey as a specialist in constructing extruded cast in-situ concrete road kerbs. Since then, we have diversified our capabilities to encompass a range of infrastructure endeavours, including drainage work, road construction, and other related projects.

Before our company's incorporation on October 20th, 2003, testing works were carried out under the expertise of our Founder, Mr. Liew Kah Sin. With over 20 years of experience in infrastructure construction and a focus on various earthworks, Mr. Liew Kah Sin played a crucial role in the field.

FARATEC® GLASS REINFORCED POLYMER PIPES

FARATEC® GRP pipes have been installed in water and sewerage projects totaling > 18,000km worldwide since 1992

ADVANTAGES OF GRP PIPES

- 1** Corrosion resistance & no sulphur dioxide gas requiring
- 2** Smooth inner linings to reduce head loss
- 3** Lighter pumping requirement
- 4** Long life or low failure rate, resulting low O&M
- 5** Have been in service since 1992 with excellent performance
- 6** Fully compliant with all relevant standards (EN 12201)

PRODUCT SPECIFICATIONS

GRP PIPES & FITTINGS:

- DN 300-2400mm
- PN 5-32 bar
- SM 1500-20000'

ISO 9001:2015 certified by TÜV SÜD, ISO 14001:2015

Industrial Pipes

- Available in long (RACK) sections

Drainage Pipes

- Available in 300mm (12 inch) to 2400mm (96 inch) length

Fire Resistant Pipes

- Resistant to fire up to 1000°C for 90 min

GRP Laying Pipes

- DN 300-2400mm
- DN 120 bar
- ISO 9001 & ISO 14001 certified by TÜV SÜD

FITTINGS:

- All fittings are available

SUPERIOR ECONOMICS

FARATEC® GRP pipes have been shown to provide a return of up to 50% in overall annual life-cycle cost over other pipe materials.

QUALITY CONTROL

All pipe material undergoes rigorous quality control tests prior to final production. Production areas are fully accredited following ISO 9001:2015 and ISO 14001:2015.

Please contact us if you would like to see a more detailed brochure or if you would like to visit our factory.

NIKKON[®]

DESIGN A SECURE, SUSTAINABLE AND RESILIENT CITY WITH iLCS.

Our iLCS is to incorporate energy-efficient lighting such as LED lights across the city. Additional functions such as motion sensors, monitoring and optimizing the maintenance schedule to ensure that the lights are only lit when required and dimmable controls to further reduce energy consumption. iLCS provides real-time data about energy consumption, carbon footprint and other sustainability metrics and promote citizen participation in achieving sustainability goals.

Software Control

Operator able to control & monitor lights individually through software installed into computer.

Light Control Unit (LCU NEMA)

Compatible with either NEMA or Zhaga socket ready to establish a smart city neural infrastructure network.

Data Control Unit (DCU)

Monitors, controls & manages all connected LCUs. It also functions as the gateway for the connected LCUs to the IT world.

Cloud Vision

Cloud based on platform for real time control of luminaires, real time monitoring of load & lighting levels.

MESSAGES

Dato Sri Alexander Nanta Linggi *Minister of Works*

Salam Madani,
Congratulations on another edition of the JKR Directory.

Where possible, we should be looking at incorporating innovations and breakthroughs into our methods instead of being stuck in the recalcitrance of the tried and tested which are not etched insacred stones.

For Malaysia, the most pressing need is addressing our infrastructural developmental needs in the most sustainable manner taking into consideration rising materials and labour costs. Make no mistake, the industry could not afford to slink away in the face of such hurdles where we should instead leverage on the culmination of our combined experience and expertise garnered over the last 66 years in building the nation's backbone architecture. Growth areas are still plenty, with Sabah and Sarawak in line with our neighbour's Indonesia own development of Nusantara in Kalimantan.

The economic landscape calls for greater emphasis on sustainable development, and this is a major factor in the Government's approach to mega projects from hereon, as we are catering not for only the now but the future. Our focus must be for all projects to benefit all concerned, developers, end users, communities and, ultimately, the nation in its overall economic well being. There is no pride in announcing grandiose projects if we leave this objective on the sidelines of our charting the nation's infrastructural development. Rest assured; the government will continue to fine tune the implementation of on-going projects towards their successful completion. As we look to brighten the industry's future, let us reaffirm our camaraderie with each other, one of the raison d'être of the continuing publication of the JKR Directory in its current iteration.

My warmest congratulations to the whole team for their successful undertaking of a task which helps to push towards higher levels of engagement amongst industry players.

Thank you.

Dato Sri Alexander Nanta Linggi

MESSAGES

Datuk Seri Hasnol Zam Zam Ahmad *Secretary General Ministry of Works*

Greetings and Salam Madani,

Congratulations to the team for another edition of this directory which has proven to be a platform promoting greater engagement between all stakeholders in the construction industry. As we move forward to another new year with anticipated challenges, the construction industry in Malaysia will have to align itself where digitalisation and automation take the front seat, with artificial intelligence (AI) being part of the controllers.

The local construction industry players can no longer be mere enablers of the nation's infrastructure development, upkeep and maintenance but are also responsible for ensuring innovative solutions by continuing to embrace digitalisation and automation trend that is enveloping the world.

As such, we must be ready to take the reins in leading this industry to the next quantum leap in productivity, by being proactive and innovative in the ways we work. We cannot do it on our own without tapping into the ready network of industry players who offer such solutions, and capitalising on the vast external resources that would exemplify the idea that the whole is greater than the sum of its parts combined.

With digitalisation in place, we can fine-tune our schedules to the exact point of when, where and what needed to be done. At the same time improving the deployment of our people at the highest levels of efficiency. Our progress towards greater digitalisation and higher levels of automation aligns with Malaysia MADANI's goals.

This is the central philosophy at play in the JKR Directory which, amongst other, provides a ready platform of new players to collaborate with industry associates who are more than capable of filling in the role required.

I sincerely hope that the effort put into this edition of Directory 2023 will provide a long-lasting impact on the strategic collaboration between JKR and its stakeholders.
Thank you.

Datuk Seri Hasnol Zam Zam Ahmad
Secretary General Ministry of Works

MESSAGES

Datuk Ir. Ahmad Redza Ghulam Rasool *Director General of the Public Works Department*

Salam Madani,

First and foremost, my congratulations to everyone who played their part towards the successful publication of the 2023 edition of the JKR Directory.

Year in and year out, the Directory has had its place in providing an excellent source of industry related information, update and a classic, eye-friendly database of key industry players, service providers and manufacturers making up an ever-growing construction family.

We need to strengthen the bond between us to face the challenges thrown our way by factors within and outside of our control. And those we could control we should embrace with the greatest care, befitting the familial relationship that had been built through decades of working together to accomplish the infrastructural framework covering the whole nation.

The PWD has been at the core of this responsibility as the nation's main structural infrastructure asset manager and to sustain this fulfilment of our role, we welcome the active participation of capable partners towards the betterment of the overall project implementation.

One thing that is certain would be that industry players should continually upgrade their capabilities to take on more and more complex projects in the near future as we look to expand the scope and extent of the nation's infrastructure.

Growth areas are never stagnant, and we should look forward and prepare ourselves to take on opportunities coming our way to test one's mettle as to further grow in expertise to take on bigger, more complicated and profitable projects.

To do so, we will need to foster close cooperation with others in this big family of ours to allow the positive leveraging of resources to improve operational efficiencies which would benefiting everyone.

Together, we can achieve greatness.

Thank you.

Datuk Ir. Ahmad Redza Ghulam Rasool
Director General of the Public Works Department

EMPAYAR INDERA SDN BHD

ABOUT US

Empayar Indera Sdn. Bhd. (EMPAYAR) is incorporated since July 2011 and we have provide quality services for over 10 years. EMPAYAR is a subsidiary of Protasco Berhad focusing on road maintenance, operation, rehabilitation and construction. EMPAYAR has been entrusted by the state government of Perak to maintain Perak State Road and Perak Agriculture Road under the administration of Jabatan Kerja Raya Negeri Perak (JKR) and Jabatan Pengaliran Saliran (JPS). The long-term contract with JKR was for a period of 7 years beginning from January 2013 - December 2019. Meanwhile, the long-term contract with JPS was for a period of 2 years beginning from March 2017 - February 2019. The contract period with JKR and JPS extended till 2026

VISION

“ To sustain as a provider of maintenance services and infrastucture construction management in MALAYSIA”

“To be able to provide customizable products and services with sustainable growth through QUALITY work environment.”

MISSION

To boost customer’s satisfaction and loyalty through creative solutions.

To continuously develop workforce talents and performance competency.

To promote and encourage effective safety & health measures through the provision of quality, accessibility and affordability of our services.

To enhance financial value through market and product diversification.

SCOPE OF WORK

01. ROUTINE MAINTENANCE

- RO 1 PAVEMENT
- RO 2 ROAD SHOULDER
- RO 3 GRASS CUTTING
- RO 4 ROAD FURNITURE
- RO 5 BRIDGES & CULVERTS
- RO 6 DRAINAGE
- RO 7 ROUTINE INSPECTION

02. PERIODIC MAINTENANCE & NON-PAVEMENT MAINTENANCE

1. PAVEMENT STRENGTHENING
2. PREVENTIVE MAINTENANCE WORKS
3. REPAIR & REPLACE DAMAGED / MISSING ROAD ITEMS
4. MINOR REPAIR WORKS
5. SLOPE & EMBANKMENTS REPAIR

03 EMERGENCY WORKS

PROVIDE RAPID RESPONSE EMERGENCY SITUATIONS

1. TRAFFIC MANAGEMENT
2. TEMPORARY TRAFFIC DIVERSION CLEARING OF DEBRIS &
3. MATERIALS

04 ASSET MANAGEMENT

1. PAVEMENT MANAGEMENT
ASSES DEFECTS, ROAD IMPROVEMENT & PROPOSE A MAINTENANCE BUDGET REQUIREMENT
2. INVENTORY DATA
COLLECT INFORMATION & PRESENT AS ROAD INVENTORY STATISTIC, ASSET VALUE & PROPOSE A MAINTENANCE BUDGET REQUIREMENT

05 PROJECTS

1. DESIGN AND BUILD
 - ROAD WORKS
 - SLOPE STABILISATION WORKS
 - DRAINAGE
 - BRIDGES AND ETC

MESSAGES

Ir. Sazali Bin Harun

Director General of Lembaga Lebuhraya Malaysia

Salam Malaysia Madani.

Considerable advancements have been achieved with regard to Malaysia's highways since the last edition of this exemplary networking resource, the JKFR Directory, which is currently in its 2023/24 edition.

To begin with, a minimum of eleven highways have adopted the Open Payment System (OPS), allowing tolls to be paid with debit, credit, or prepaid cards that feature the MyDebit, Mastercard, or Visa logos. BKE, BESRAYA, NPE, KESAS, LDP, SMART, SPRINT, GCE, AKLEH, DUKE, and MEX are the pioneering cohort for this Open Payment System (OPS). The OPS provides highway users a novel alternative for toll payment methods to the existing toll payment methods, which are the Touch 'N Go, SmartTag, and Radio Frequency Identification (RFID). Additionally, the OPS is also in line with the effort to transition to the implementation of the Multi Lane Fast Flow (MLFF).

Albeit the end of the Covid-19 pandemic has had a profoundly adverse impact on the construction industry, I am confident that the construction industry will continue to stimulate the nation's growth. Much can be accomplished when we collaborate to resolve any arising difficulties, and this is precisely the idea promoted by the JKR Directory through its extensive database of industry players.

For instance, the enhanced cooperation between state governments, the Ministry of Works and, to a certain degree, LLM concerning the strategic development of highway upgrading initiatives expedites the process from conceptualization to construction. This collaboration is undeniably a positive development since a higher degree of cooperation among all relevant parties from the inception of a highway project will allow a greater level of coordination, thereby ensuring smooth and efficient execution of future maintenance activities that promote road's durability, safety, and convenience of all users. Much can be accomplished when we collaborate to resolve any arising difficulties, and this is precisely the premise promoted by the Koperasi JKR Directory through its extensive database on industry players.

Infrastructure development, including the construction of roads and highways, is never the sole responsibility of the enabling government; rather, it takes the combined efforts of all concerned parties to transform conceptualization to reality. Although the increased mileage on newly constructed highways will inevitably increase the workload for LLM in terms of monitoring their maintenance to ensure smooth travel and other related activities, this is a responsibility we willingly shoulder since we are all the end users.

Thank you.

MESSAGES

Ir. Haji Yusuf Abd. Wahab *Chairman of CIDB Malaysia*

Salam Madani and a very warm greeting to all,

First and foremost, I would like to thank Koperasi JKR Malaysia Berhad for inviting me to pen a few words in this directory.

All of us know that the construction industry is one of the most important economic sector fuelling the economic growth of the nation.

Today, all players in the construction industry must abide by the Environmental, Social and Governance (ESG) standard being adopted in major economies globally.

We understand that the adoption of this new goalpost could be achieved effectively and efficiently through the use of technology.

Technology adoption is not just about using automation and software. The industry needs to upgrade and enhance their knowledge and skill in order to take full advantage of the technology that is available.

Being ESG compliant will definitely enhance opportunities for our industry players in the global market.

Through resources such as this directory, let us all explore the many opportunities that come our way to build ourselves to take on challenges which we know fully well will materialise one way or another.

Thank you.

Ir. Haji Yusuf Abd. Wahab
Chairman of CIDB Malaysia

MESSAGES

Ir. Zulkifli Ahmad *Chairman of Koperasi JKR Malaysia,*

Salam Madani to all.

In this world where the only constant is change, our relevance lies in whether we continue to have a role to play in the new environment. And the answer is resoundingly positive, just like the latest edition of the JKR Directory the team behind its publication has successfully managed to produce year in and year out.

Never think we are insignificant in the greater scheme of things or when the going really gets tough as we never will know how things will turn out in the future if we do not take that very first step, and then the next.

Innovations, while looking spontaneous, often takes form from a combination of this bravado in taking the next step at the same time of learning from experience. As family members of the construction industry, we all can take pride in that somewhere along the path of this nation's infrastructural growth, we had played a part and we can continue to contribute in all ways possible one way or another.

This is the dynamism which we hope the continued publication of the JKR Directory would help promote as the industry face up to challenges and complexities needing the combined effort of everyone to strive forward.

Let us all provide the environment to facilitate in the exploration in new opportunities, collaborations and building new circles of networking as we built growth that would benefit everyone.

Thank you.

Ir. Zulkifli Ahmad
Chairman of Koperasi JKR Malaysia,

GEOBAMTILE

A Malaysia Initiated Bamboo-geotextile Buoyant System for Effective Soft Ground Treatment

- An experience proven reliable soft ground treatment technique of Malaysia origin to support very heavy structures safely over varied deep soft grounds
- Ensure enormous cost and time savings in projects
- A 'Soil-Structure Interaction' based technique entails immediate soil displacement only i.e. without causing long-term consolidation settlement.
- A truly green & sustainable method imparting positive social impact by bringing direct economic benefits to rural & indigenous population who harvest and supply bamboo materials for the projects
- Simplicity and rudimentary nature of this method mean
 - Little, if any, site preparation or removal of unsuitable materials etc.
 - No surcharging, i.e. no bringing in or bringing out soil materials during & after surcharging resulted in no idling and thus substantial cost and time savings to projects
- Objectively, this method compares favourably in terms of technical, time & cost with most if not all ground improvement and/or treatment methods available to date

MESSAGES

Ir. Mohamad Zaidi Ibrahim *Secretary for Koperasi JKR Malaysia,*

Salam Madani.

My congratulations to the team who have worked tirelessly toward the successful publication of the latest edition of the JKR Directory.

We at Koperasi JKR Malaysia is proud to have played a part in facilitating the building of a closer relationship within the expansive members of the construction industry which grows everyday as the world embraces new standards and innovations.

Never has there been a better time to expand our network of partners than now, especially as we explore the opportunities amidst the complexity that the latest mantra, ESG brings our way. We had embraced Green Building and automation, building with the help of software engineers.

Something our forefathers in the industry might have foreseen, but never experienced, so what is to stop the pace of technology from making processes easier for industry players in the future? Yes, we are concerned about redundancies being replaced by machines, but the truth remains that the human capacity for learning is as infinite as the latest in artificial intelligence.

Maybe we operate slower, but we do hold the advantage of having empathy, and imagination, allowing us to dream and build on those dreams in the way we all had helped build the infrastructure of this nation.

Let us not forget that we are all in this together.

Thank you.

Ir. Mohamad Zaidi Ibrahim
Secretary for Koperasi JKR Malaysia,

Helping Malaysia Build Greener

YTL Cement is dedicated to supporting the construction industry's transition to sustainable practices by ensuring the consistent quality and environmental friendliness of our products. We actively promote a circular economy by giving materials a second life, encouraging reuse and recycling.

Our commitment to sustainable construction aims to make a positive impact on the environment and society, driving change and inspiring others to adopt sustainable practices.

MESSAGES

Ir. Ts. Sumie Sarmiza Abd Suki *Treasurer for Koperasi JKR Malaysia*

Salam Madani and Salam Sejahtera.

First and foremost, congratulations to everyone involved in the publication of in my mind a very important archive charting the growth of our industry.

Only when we take time to reflect on the journey the industry had taken through the decades of this nation's growth will enable us to realise how our network of partners and collaborators added colours to our life. These experiences allowed us to become better at the jobs we do and help strengthen our relationships with others. In a world that grows in complexity, we should be mindful in the way we engage with others.

Remember the days of the pandemic, when we could not meet face to face, experiencing the warmth of getting together to discuss and chart our planning to complete projects big and small? These days, online meetings and, oftentimes, process collaborations are the norm, whereby we do not even have to meet and get to know the very person or company whose inputs and actions are an important facet in the projects they undertake.

The world can become colder as such and it is comforting to be able to pause on what was while pursuing what could and will be.

This, I firmly believe, is where brick and mortar efforts like the JKR Directory in your hands plays its part. An old school platform that reminds us of the foundational core this industry is built on: the extensive family of industry players which we depend upon whenever we start dreaming of the next building, the next bridge, the next public utilities we would help to construct.

Let us keep this bond strong as we strive to march ahead irrespective of the challenges thrown in our way.

Thank you.

Ir. Ts. Sumie Sarmiza Abd Suki
Treasurer for Koperasi JKR Malaysia

DEMOCRATISING SMALL INFRASTRUCTURE PROJECTS

The government, through the Economy Ministry, launched the People's Facilities Initiative (IKR) in June 2023 as one of its efforts to help the public through the improvement of small public infrastructure.

Essentially the IKR is an allocation from the government said to be aiming to democratise the allocation of public funds and the ensuing implementation of small projects at the local levels.

Regulated by the state government and local authorities, the criteria for applying to funding of up to RM200,000 are that the small projects being applied for should provide immediate benefits to the community.

Another requirement under the programme is that the project should not overlap with projects which have received allocation approval from other

government agencies. These includes maintenance and repairs of public infrastructure such as drainage, roads, bridges, footpaths, slopes, banks, gabions, embankments, sports courts, playgrounds, children's playgrounds, community halls, and other recreational facilities.

Direct Funding to Local Communities

One of the objectives of the IKR programme is to provide additional funding for especially maintenance of infrastructure of local authorities hampered by the problems of a lack in their operational budget.

Local authorities are after all funded mainly from three sources: grants from the Federal government, local taxation including quit rents or property assessment tax, as well from rents and fees for services they provide. All well and good, until one factor in the myriad of responsibilities each local authorities are hampered with responsibilities - shared with State governments - including social welfare, urban planning, healthcare, fire safety, housing, culture and sports, drainage, and irrigation.

Since the Ministry of Economy, which oversees the IKR, doesn't have any agencies under to handle the implementation, local authorities are the best option as they will be the direct recipient in the funding in relation to the jobs required to be undertaken.

In other words, local authorities now have another source of funding specific to upgrading and maintaining of their public infrastructures and amenities as and when such funding is required.

Generating Jobs for Small Contractors

Another beneficiary envisioned by the IKR programme are the many small contractors who could now undertake such works directly from the local authorities instead of being subcontractor by a middleman.

This is one of the reasons for the imposition of the maximum in funding made available for applications made to the IKR either by the public or even the contractors themselves.

Local authorities would be able to assess accordingly the contractors' abilities and the submitted bill of quantities for works applied for. Indirectly, such a process provides much better value in the job undertaken especially since no funds are leaked for non-related items and parties who provides nothing but the token "administrative assistance".

All applications will still go through several steps starting with an evaluation by the Ministry, and upon approval, followed by a review of the funding required by the relevant agencies or local authorities before the final approval is made and funds provided.

Rave Reception

The fact that the IKR opens with a bang provided clear signal in the programme fulfilling its designated objectives and hitting the mark by allowing the people affected by the need for maintenance and upgrading to apply for funding for the jobs needed undertaken.

It doesn't mean though that the people applying for would take on the jobs themselves since the local authorities will still vet through the final contractor

for the jobs which includes maintenance and repairs of roads and drains but also public buildings, as well as sporting and recreational facilities.

The programme has up to August 2023 received a total of 3,398 applications with some 1,491 applications received from individuals, 988 from non-governmental organisations and another 918 from government organisations including local authorities.

Sabah recorded the highest number of applications with 909 projects followed by Negeri Sembilan with 559 projects and Sarawak with 268 projects.

The Ministry has thus far approved some 1,385 projects while rejecting another 245 applications mostly for not meeting the application justifications and conditions. Among the approvals approved so far include road repairs, canals or drains, renovations of surau or mosques, construction and renovation of public toilets, and the building new bus stops.

Shifting of Focus

The focus on small works also tackles a major problem which is a direct impact from the pandemic and the high national debt which saw priorities shifting to debt repayments and the much big projects as to generate the necessary economic stimulus effect.

As a result, maintenance especially of public infrastructure suffers from cutting of allocations. With the IKR, such highly localised projects of which the benefits will be felt by the local communities where they are undertaken as soon as they are completed by contractors.

It is a novel idea enabling communities to really collaborate between residents, local contractors, and the local authorities towards the betterment of their respective localities in a democratised move of empowerment.

INFRASTRUCTURE DEVELOPMENT IN THE FACE OF HIGH NATIONAL DEBT

EMBARKING on large scale infrastructure projects ranked one of the more effective moves to spur a nation's economic growth as the spill-over benefits and activities are across many sectors and could ratchet up employment levels.

The caveat, of course, in that they are well-planned and implemented to further stimulate economic activities that would benefit the whole nation in the medium and long term, hence the reason why such mega projects are often termed as stimulus spendings.

Thus, when news broke out that the national debt stood at RM1.45 trillion - federal government debt (RM1,079.6 billion), guaranteed commitments (RM205.9 billion), 1MDB (RM18.2 billion), and other liabilities (RM142.2 billion) - as at end 2022, warning bells started ringing across the industry players, many understanding what this huge figure

meant. To date, no new mega projects have been announced, and the industry is bracing itself for a possible austerity drive.

No More News Hogging Mega Projects?

The 12th Malaysia Plan mid-term review featured upgrades and continuation of existing infrastructures including the Phase 1B of Pan Borneo Highway

Sabah, expansion of Penang International Airport; redevelopment of Sultan Abdul Aziz Shah Airport, Subang; and the upgrade of the East-West Highway from Gerik, Perak to Jeli, Kelantan.

Other road and highway infrastructure projects announced were the expansion of Bus Rapid Transit (BRT) and intra-city bus services including in Johor Bahru and the Klang Valley; upgrading of the Senai-Desaru Highway; widening of the North-South Expressway from Yong Peng to North Senai; construction of Sarawak-Sabah Link Road II; and upgrading of the road from Tanah Rata to Kea Farm, Cameron Highlands.

New mentions, albeit still already very much in the pipeline was the Penang Light Rail Transit (LRT) Project and the development of a new port on Carey Island aimed at strengthening Port Klang as a regional shipping hub.

The Government said the intention was to provide better access and connectivity of the public transport services that are more efficient, reliable, affordable, and safe.

Energy Network Revamp

Another segment of focus in infrastructure projects follows largely the global direction in pushing for greater sustainability in energy usage and gridwork with the establishment of the National Energy Transition Roadmap (NETR) in July 2023.

The programme focusses on renewable energy (RE) development and upgrading of the electricity supply system with a 1 GW hybrid solar power plant to be built by HEXA Renewables in Peninsular Malaysia,

the first of some 10 strategic and high-impact flagship projects with an expected investment of RM25 billion.

It's rightly touted as the largest in such a facility in Southeast Asia In general potentially to have between 2.4 to 3.2 million photovoltaic (PV) panels to generate 1GW of energy. As comparison, the Bakun dam generates 1.7 GW of power while Lake Kenyir's Sultan Mahmud dam gives 400 MW.

The government has set a target of achieving 70% renewable energy share in its power mix by 2050 led by solar PV technology, the most viable for this year long sun-soaked nation.

Public Private Financing Route

In general, the announcement lacked the excitement of 'big-ticket items which would drives the market especially with bigger contractors' participation which are less likely on the small to mid-size public projects which provide lower margins. However,

the high national debt does raise concerns on the financing of such projects and the mid-term review of the 12th Malaysia Plan also saw an increase to RM419 billion from the RM400 billion allocated at its outset.

One aspect of launching mega infrastructure projects which the 12th Malaysia Plan set out to address was the proposed establishment of a specific facilitation fund under the Public Private Partnership (PPP) 3.0 model for future projects.

The reason for this was obvious: there was just no way for the government to provide any major financial commitments and signify the role to be played by the public sector who together with a government agency would collaborate to finance, build, and operate a particular project.

Since the projects announce were lowkey at best, there question of funding did not really feature which would have been a highlight for more mega projects such as the KVMRT, the East Coast Rail Line as well as the still-pending Kuala Lumpur – Singapore HSR.

A Historical Perspective

We had gone a similar route via the Private Finance Initiative (PFI) financing of our infrastructure started in the early 1980's, the development spurt which had led to Malaysia being ranked (then) as having one of the highest quality infrastructures in Asia, surpassing South Korea, Thailand, and Indonesia.

The North-South Expressway spurred development of all major towns and cities along its route, KLIA and KLIA Two enabled the establishment of several airlines taking advantage of the additional

flight lanes and combined with Putrajaya, created a now booming new economic zone in Sepang, less so Cyberjaya.

Two sides of a largely similar kettle, the main difference between PPP and PFI is that the latter utilises debt and equity financing from private sector to pay the upfront capital costs, while in PPP, the arrangement is largely more flexible including projects being structured on a joint-venture basis.

Either way, financing a project through a public-private partnership can allow a project to take off and even completed sooner or make it a possibility in the first place.

The Government is also thus able to redirect some of the risks in both constructing and, just as important, maintenance to the private sector.

Long Haul Concerns

This facet represents the one major drawback in opting for either the PFI or PPP route in financing infrastructure projects. i.e., the concessions afforded to the private sector to take on such risks.

These may come in the form of tax or other operating revenue, protection from liabilities, or partial ownership rights, and transfer or swap nominally public services or properties.

The most apparent in the public are the tolled roadways and highways since these are paid per use and remain a particular bugbear with every extension of the concession period often made for the construction of another infrastructure project. However, the carrot of continuous profit also means that private sector participation would (in theory at least) improve the overall maintenance of an infrastructure for the long-term use, and further assisting in reducing the public coffers.

The long-term cost implications meant that all PPP and PFI projects need iron-clad agreement and monitoring to ensure there are no hidden profiteering clauses inserted to benefit the private companies undertaking such projects.

Clear Goals

In what was the first major pronouncement in nationwide construction projects following the 12th Malaysia Plan mid-term review, the Government makes clear the general direction in the development of the country’s infrastructure projects.

The priority is for value and lowkey projects over vanity and high-ticket mega projects. There was no mention of the on-going mega projects which are pretty much chugging along towards completion on their budgeted allocation.

The focus certainly was to give the biggest bang for the buck in terms of immediate benefit to the people when they are completed and introduced to ensure the development of a sustainable and resilient national infrastructure.

Not the best of news to industry players - small and large - in terms of much-needed support for the sector, but a direction wholly understandable, given the state of the national coffers vis-à-vis the future debt repayments we are faced with.

LINKING THE NATION

- The case for upgrading and extension of rail services

Rail aficionados were without a doubt the most excited when news broke out that Malaysia was slated to be one of the four members of Asean for a high-speed rail network connecting to China.

Malaysia had earlier requested a high-speed rail connection with Thailand who had mooted a rail network linking China, Laos, Thailand, Malaysia, and Singapore.

Businesses were especially overjoyed over the prospect of having in place a highly efficient and cost-effective transportation for goods between the nations, with some studies citing savings of around 20% when compared to sea freight.

Whilst the regional working committee sorted the logistical aspects of such a monumental project, the nation got itself going with the East Coast Rail Link (ECRL) project connecting Kota Bharu Kelantan with Port Klang in Selangor.

The East Coast Rail Link

Planned as a means of connecting and spurring the economic development of the East Coast Economic Region comprising Pahang, Terengganu, and Kelantan, the 665km ECRL is slated as a key project under Belt and Road Initiative between China and Malaysia.

China's state-owned enterprise, China Communications Construction Co. Ltd. is the main contractor for the project which runs from Kota Bharu in Kelantan and ends at Port Klang in Selangor passing Kelantan, Terengganu, Pahang, Negeri Sembilan, Selangor and Putrajaya.

Tunnelling Through

The project, which was launched in 2017, sees CCCC joining Malaysia Rail Link (MRL) in managing the overall implementation including the construction of industrial zones and freight storage facilities along the rail line as part of the impetus to spur economic activities along the route.

To date, the project has progressed to 49% completion with the latest milestone being the successful completion of tunnelling works along Section A (from Kota Baru-Dungun) and Section B (Dungun-Mentakab).

This was a breakthrough as the 1,328m-long Kampung Gedung Siam 3 tunnel avoided major deforestation in the area by using the drill-and-blast

method and its completion enables the operation of two standard gauge railway tracks. According to MRL, the infrastructure work of the tunnel is expected to be fully ready by April 2024.

The ECRL's main concern is in keeping down the construction costs from the many tunnelling needed across the whole alignment with a total of 25 having been completed thus far including the 21 tunnels located in Sections A and B, and another four from 19 in Section C from Mentakab to Port Klang.

Here, CCCC experiences and capability in overcoming engineering challenges through using modern tunnelling technology proved the catalyst enabling the project to run according to schedule with installation of the tracks targeting before the end of 2023 starting with the 90km rail alignment from Gebeng to Dungun.

Cost Constraints

The complexities inherent in the ECRL saw it being slapped with an initial development tag of RM85.97 billion (ECRL 1.0), including a construction cost of

RM66.78 billion and another RM19.19 billion for development costs, including land costs and interest expenses.

This was then revised to RM66.02 billion before ballooning up to RM74.96 billion in total on a construction cost of RM50.27 billion, and other development costs at RM24.69 billion due mainly to increases in the interest expenses to RM15.59 billion from RM11.7 billion.

A silver lining in the overall cost is the revision downwards to land acquisition cost RM7.55 billion from RM8.92 billion. In contrast, the 848-km North South Expressway was built at a cost of RM5.9 billion, traversing from Bukit Kayu Hitam, Kedah to Johor Bahru, Johor and running across eight states spurring the extensive economic development along the routes in what was money well spent.

Will ECRL be similarly the catalyst for the East coasts states it runs through and allowing a recouping of the investment made by the government is pushing through the project despite its high price tag? With the project nearly halfway through and billions in construction cost having been expended, we should see ECRL tracking to its completion.

Speedy Matters

Less clear on the way things are headed is the 335km Kuala Lumpur-Singapore High Speed Rail (HSR) project which had been mooted through the Economic Transformation Programme.

The idea for the HSR was that of transforming Malaysia into a high-income nation by providing an alternative, supposedly more cost-efficient and transit-friendly travel mode between two capital cities.

The iconic project will include seven stations in Malaysia – Bandar Malaysia, Sepang-Putrajaya, Seremban, Melaka, Muar, Batu Pahat, and Iskandar Puteri, before reaching its last destination in Jurong East, Singapore, for a 90-minute trip point to end. Thus far, there has not been a definite figure on the projected development cost for the project mooted in 2017.

The initial figure of RM72 billion was reviewed to RM100 billion only to be re-reviewed to RM68 billion, largely a result from the tumultuous political changes occurring during the same period following the inception of the project.

A Quagmire of Differing Implementation

When the project was proposed, it had three components: an operating company, the Project Development Partner (PDP) and an asset holding company and two consortiums were awarded the PDP contract end 2017.

The two PDP contracts were a northern portion of 135km from the Bandar Malaysia to Melaka, and a southern portion of 200km, from Melaka through Johor bordering Singapore. A change of government saw a review of the planned implementation whereby it was decided for the PDP format to be scrapped in favour of the Ministry of Works to instead play a more important role, with the Minister of Finance Inc’s wholly owned company, MyHSR Corp Sdn Bhd, the project delivery vehicle and implementer of the project.

Operations were targeted to commence by end-December 2026, and the construction including some 60 civil works packages and more than 5,000 sub-contract packages.

The latest round of news emanating on the HSR projects suggested that it could still progress albeit with strangely the republic of Singapore thrown into the mix as being involved in a governmental discussion over the matter.

Contrasting Priorities

The contrast of the two strategic rail links tells a story of priorities on the background of the main drawback

of all rail networks; unlike highways and roadworks, the benefit from its construction is neither immediate nor apparent to clearly justify the extensive work put in place.

ECRL could spur the economic growth of certain zones of its passages, but only if they are matched with the prerequisite infrastructure development in stations, roadworks for seamless interconnectivity.

In the case of the KL-Singapore HSR, this facet is already built-in as the network runs through urban areas between two business capital that would exactly serve the socio-economic development narrative in its implementation.

The problem with HSR though is that the high development of what is essentially a more upmarket alternative to existing solutions – road, rail, and air travel – entailing a very high cost to a project the priority of which is clearly not on the government’s radar.

This will invariably dictate whether the imagined regional seamless interconnectivity provided by this efficient transportation system will see fruition.

THE PROGRESS OF THE KLANG VALLEY INTEGRATED TRANSIT SYSTEM

The Klang Valley Integrated Transit System was envisioned to provide service to over 450,000 commuters daily.

The RM50 billion bill had been the main bugbear for the Mass Rapid Transit Line 3 (MRT3) project with the government trying to bring down the costs to about RM45 billion.

Some big names in the construction industry have been putting forth their proposals for the cost reviewing exercise including MMC Corp Bhd, Gamuda Bhd, IJM Corp Bhd and Malaysian Resources Corp Bhd (MRCB) just to showcase the importance of a correct decision.

The MRT makes up one of the three-line which includes the Light Rail Transit (LRT), the original rail link introduced in 1996 - and the KTM Komuter lines which includes the KL Monorail.

Moving More Than Mere Transits

These initial lines had largely serviced the satellite towns, making the greater Kuala Lumpur and Petaling Jaya better connected, but more was needed for the services as hundreds of thousands in motor vehicles continued to throng the roads and highways.

Mindful of the positive impact and, more importantly, the interest of greater interconnectivity for greater Klang Valley, the Government thus gave its green light for LRT services to be extended further to include Sungai Buloh, Damansara and Klang.

The project initially began with the 46km Kajang line linking Sungai Buloh and Kajang and began its operations in December 2016. Phase 2 covering Semantan to Kajang was started the next year on July.

The idea was to make the KVMRT the catalyst to enhanced connectivity, mobility, and the very agent to further spur the economic development of the extended Klang Valley.

In total, the KVMRT integrated transit system comprises 11 fully operating rail lines; two commuter rail lines, five rapid transit lines, one bus rapid transit line and two airport rail links to the Kuala Lumpur International Airport and its low-cost terminal in KLIA2.

The project's scope brought excitement to the construction sector as the amplifier and economic spillover benefits extended beyond the main players, only for the behemoth construction cost to run into a snag leading to a quagmire yet to be resolved.

Billing Concerns

Expanding outside of the existing LRT line instead of being a direct linkage and developmental upgrade set the narrative for the MRT line, starting with the 51km MRT Kajang Line in 2017.

The second link, the MRT Putrajaya Line, came into operation March this year, and the MRT3 Circle Line is set to be the last piece of the network, running high-density areas, including Setiawangsa, Titiwangsa, Mont Kiara, Pantai Dalam and Pandan Indah.

The Government has in principle approved the 50.8 km MRT3 project with the final decision for a green light hinging on the possibility of reducing the overall cost which is estimated at a whopping RM50.2 billion.

In comparison, the 46km MRT Kajang line which runs from Sungai Buloh to Kajang and with a 9.5km in underground link cost RM21 billion to build, while the 37.6km LRT3 line from Bandar Utama to Johan Setia, Klang which includes a 35km viaduct and a 2km underground tunnel cost around RM16.6 billion.

Complexities Abound

The scope of construction for the MRT3 in its original proposal is one of the main reasons for the high construction cost.

MRT3 is envisioned to feature a total of 30 stations including Bukit Kiara, INTAN (National Institute of Public Administration), Sri Hartamas, Mont Kiara, Jalan Duta, Matrade, Jalan Kuching, Sentul West, Sentul East, Ayer Panas, Semarak, Setiawangsa, Ampang Point, Desa Pandan, Pandan Indah, Taman Perdana, Taman Midah, Hospital Canselor Tuanku Muhriz UKM (previously known as HUKM), Kuchai Lama, Old Klang Road and Pantai Dalam; 10 of which with interchanges with existing rail lines.

The original plan is also for the at least 40% of the rail lines to run underground with the implementation set to be in five independent phases built over a period of 10 years and utilising the Private Funding Initiative (PFI) route where local private players will part-fund the project.

Therein lie the other elephant in the room as it meant that only industry players with deep pockets could play a role and even then, the relatively lengthy construction period added a measure of caution even to the optimistic developer.

Completing the Circle

Completion of the MRT3 is nonetheless a necessity for the Klang Valley Integrated Rail Link to be a real boon to both commuters as well as traffic management for the perennially traffic-choked capital city of Kuala Lumpur.

The running view thus is that there are reductions to be made to the MRT3 from cost savings in project management, land acquisition, construction optimisation and financing costs, especially by removing a previous requirement for contractor

financing for the first two years of construction.

This is a major consideration as government’s financing cost will be lower than the private sector. Another aspect in creating a completed and integrated public transportation system that is also being considered is the bus lines linkages, especially with the lack of a single hub for the rail transit integration.

Substantial investment has been made in this facet to enhance the overall connectivity with the construction of the Terminal Bersepadu Selatan (TBSS) allowing links to intercity coaches and bus services to the rail links.

For the moment at least, the days of hop-in, hop-off public transportation as a thoroughly viable alternative to driving will remain until the creases in transit lines are ironed out.

MANPOWER CONUNDRUM

- Our Continued Dependence On Foreign Labour

Ever since the nation fast-tracked its infrastructure development, the huge number of construction projects led to the influx of foreign workers, pointing to our inability to move forward without this external crutch.

At an estimated 80 percent to 20 percent in ratio between foreign and local workforce, we have unfortunately to the point of over-dependency on foreign workforce and their dominance even as we grow and developed as a nation.

The Covid-19 pandemic revealed the huge impact on the construction activities from any disruption of this labour supply, something which many players have not been able to fully recover from especially having been reliant on workers from a limited source country. Alas, the economic sector still suffers from the perspective of being an unfavourable working environment, with an

equally less than desirable salary-range, forcing industry players continuing to pin for foreign workers to fill their roster.

A recent report indicates that the construction industry is facing a shortage of some 550,000 workers, one which had forced industry players of staring at higher costs from delayed delivery and completion of projects.

Quality Versus Quantity

The bricks and mortar nature of previous years construction method in a way contributed much to the disdain in interest from local workers with the industry highly labour intensive in its outset.

Other than those who are involved in project management, most of the labour required are low skilled workers and as the years go then, the industry found that the cheapest and fastest method to fill this vacancy was to employ foreign workers.

Prior to the pandemic, the industry was estimated to be employing some 435,000 foreigners in its ranks which accounts for more than 20% of the total in documented foreign workforce.

That the bar was set low wasn't hard to understand since the workers needed are largely semi-skilled, requiring little in technical knowledge or expertise which are more prominently the domain of the 20 per centum in most development project.

With Indonesia embarking on the mammoth construction of its new national capital Nusantara, located in East Kalimantan from Jakarta, the opportunities generated by the estimated RM148 billion developments will draw already scarce human resources away from our market.

We expect that this will lure more local and foreign labours to Indonesia, which will further worsen the issue of labour shortages in Malaysia.

Is There No Way Out?

To address this issue, there is little alternative but to cast our eyes across the developing countries divide towards developed countries such as China, Japan, Germany, and the USA where the work processes are highly mechanised in contrast to our labour-intensive approach as a major component of construction work.

There has been some major stride made in this respect with the government and related agencies pushing for greater use of technology and innovation to provide the kind of working environment which would entice locals.

One such is the Industrialised Building System (IBS) which helps address issues of poor workmanship, delay in completion, and inferior quality of construction works, and eventually improve the overall performance by minimising the human factor to that of automation.

Adopting this thrust of greater mechanisation is however limited to the bigger players who can take on the procurement of such innovative technologies enroute to the digitalization of developmental planning via the Building Information Modelling (BIM) and utilising Internet of Things (IoT) to further improve their management of projects.

Another major hurdle for the smaller players from adopting such a solution is the need to train the personnel, something with the government with the focus provided by the Construction Industry Development Board (CIDB) to help incentivise the upskilling of our workforce.

The greater promotion and training on the use of modern technology would facilitate a greater number of stakeholders to explore into the application and usage of IBS in their future projects and hence reducing the reliance on foreign workers as the only viable method for completing any construction work.

Working in Tandem

The industry is already tuned to the fact that its dependency on the tried and tested, with foreign workforce at its core is a costly option and vulnerable to a host of external volatility they could neither predict nor control.

There is a clear alternative by way of embracing the new, a more mechanised way of constructing but the rift between investing and recouping the sum invested with construction projects growing in complexities and scope is daunting to say the least bar to a few major players.

Understanding the stark reality of being rendered obsolete by way of the insistence on conventional building methods is thus hampered by the needs to survive and this is where the government could come in by providing guidance and encouragement by way of tax relief, incentive, and financial assistance.

Transformation is never an easy thing to do, but it is one challenge that the whole industry needs to face head on to ensure a sustainable and continued vibrancy in this important economic sector which benefits encompasses the many.

ESG IN CONSTRUCTION

- UPGRADING THE GREEN BUILDING INDEX

One of the most important contributors towards a sustainable, low carbon economy is the construction industry as it not only builds the infrastructure, but it is also the key pillar where all nation's long-term investments are made for the community.

Notable too is how the adage “you cannot make an omelette without breaking an egg” must be kept in mind when almost all construction projects will entail land clearing, contribution to high levels of air and water pollution, heavy use of natural resources. The list goes on.

Three years ago, Malaysia identified sustainability as one of the core values in its Construction 4.0 Strategic Plan as published by the Construction Industry Development Board Malaysia, following through the earlier focus as highlighted in the Green Technology Master Plan of 2017–2030. The key aspects put forth in the strategic plan included more

extensive use of green building design and operation, promotion of sustainable construction practices, and continued utilisation of green building materials in new projects.

Policy Matters

One of the very first initiatives towards more sustainable construction practice amongst the local industry players was the Green Building Index (GBI), developed by the Malaysian Institute of Architects and the Association of Consulting Engineers Malaysia in 2009.

GBI provides the impetus amongst the especially bigger developers to showcase their commitment to the sustainability agenda with a recognition in their incorporation of environmentally conscious design and infrastructural elements that adds value to the business and living space by way of enhanced experiences.

It was however only in 2016 that the government through the Public Works Department made a policy ruling by making GBI compulsory for all government building projects worth RM50 million and above.

As at date, there are 389 registered GBI projects in Malaysia ranging from residentials, corporate offices, towers, retail complexes and government buildings, many of which are being occupied and taken up by multinational corporations (MNCs).

Other than the draw of potential cost savings in electricity – a particular benefit of well-designed green buildings, many MNCs are also more tuned to the overall thrust of sustainability initiatives as part of their corporate social responsibility (CSR) goals and commitment.

An Expansive Green Agenda

Of late, a more concerted effort towards a more holistic approach to sustainability that is being adopted globally has arrived in the form of the

Environmental, Social, and Governance (ESG) compliance which is framed around the United Nation's 17 Sustainable Development Goals (SDGs).

Thus far, the focus of green building initiatives is towards constructing low carbon emission buildings, starting with the whole life cycle of a construction project as well as the post occupation greenhouse gas emissions.

On the national scale, the nation has committed itself to reduce greenhouse gas emission to 45% by 2030 and for a net-zero emission by 2050 mainly by improving efficiency in our utilisation of resources, stronger investment in clean energy and overall improvement in emissions.

All three are inherent throughout the construction industry from the planning, procurement of building materials and labour usage to the actual building process.

In a 2019 study, the building and construction sector was attributed as being responsible for nearly 40% of energy and process-related carbon dioxide emissions mainly from the manufacture of building materials and products, such as steel, cement, and glass. As such, any net-zero emission drive and initiatives need to be implemented across the entire value chain of a construction project to achieve the meaningful outcome contributing towards sustainability.

Going In Full Embrace

While ESG on scale is far too extensive to be implemented in all construction activities, it is the globally recognised goalposts and guiding principles to which industry players would need to keep track to stay competitive.

Our construction industry has been receptive in the overall focus in the green agenda and sustainability drive by adopting technological advancement in both software and hardware to introduce greater efficiencies in their projects.

The new projects would invariably include green certification, utilises in-house industrialised building systems (IBS) manufacturing facilities, Building Information Modelling (BIM) and other design automation, and the greater use of eco-friendly green building materials.

There is a rising demand for green-rated and environmentally friendly buildings and the opportunity for the construction industry to play its part in limiting the negative impacts from construction activities.

Standardised Implementation

The challenge of ESG is in its wide range of frameworks from different standards and requirements applied across the multitude of SDGs at play.

The construction industry has the added difficulty in finding low or net zero building materials, especially for small and medium companies.

Both the Covid-19 pandemic and the ensuing and still prevalent Russia Ukraine war disrupted supply chains worldwide, making them even more difficult to find and use low-carbon alternative building materials.

So much so, there is a real test for industry players intent on following through with their green commitment with a far more flexible pricing of their projects accounting for price adjustment and fluctuation from their contractors due to the continued volatility in the market. There is no doubting that ESG principles and values cannot be implemented overnight.

As to date, efforts are underway for a more cohesive and standardised ESG framework that would allow higher levels of applicability in the construction industry along the lines of the GBI which is a highly focussed and implementable option for many.

A successful push for greater implementation of green construction will need all stakeholders within the industry to embrace the principles behind the whole initiative.

PROPERTY SECTOR OVERHANG - WHERE WILL THE DEMAND COME FROM?

The property sector in Malaysia has grown more than double over the last two decades in terms of numbers as well as volume as in tandem with the country’s economic growth around the same period. Due to this growth, the average price of homes also rocketed from about RM218,000 in 2010 by nearly one-fold to RM428,000 ten years later.

Whilst wages of Malaysians also grew somewhat during the same period, one could see how such increment would be hard pressed to match with the ensuing incoming supply of properties especially in the more urban communities.

It created an imbalance where potential purchasers somehow finding themselves priced out from their “dream home” and resorting instead to either scale down, opting for rentals or the latest, staying put in family homes.

Homes Unoccupied

Following the nation’s economic recovery from the declines which led to shutdowns during the Covid-19 pandemic, property sales have somewhat rebounded in the first half of this year.

Real Estate And Housing Developers Association (Rehda) members reported a 120% jump in sales of 11,273 units of residential and commercial properties which nearly surpasses the 11,399 units sold before the pandemic hit the country which led to shutdowns on a massive scale on all sectors.

The fact however remained that there were still a large number of completed units that remain unsold from a host of issues including financing issues, high property prices, and locked up units reserved for the country's majority Bumiputera group.

At the end of last year, official statistics indicates there is a total of 22,746 units of property worth RM18.41 billion that remained unsold more than nine months after receiving the Certificate of Completion and Compliance (CCC) and Temporary Certificate of Fitness for Occupation (CFO).

The good news however is that this figure represented the first time the overhang property basket had dropped below the 30,000-mark in two years thanks to a strong rally in total transaction volume and value.

Realities On The Ground

On the other side however is the on-the-ground struggle on developers facing a host of challenges from building materials price and utilities cost increases to shortage of workers to undertake onsite task and processes.

And a sizeable number of the properties in the figure presented have been units in the markets for more than three years, according to Rehda. Ironically, the property segment which recorded the highest in unsold units are high-rise developments and properties priced below RM300,000 with

unattractive location, low connectivity, the public preference toward landed properties over the high-rise housing.

Another conundrum which afflicted the local market is a direct result of the increasing lopsided low-middle income earners and high indebtedness amongst this segment leading to financial institution being unable to lend due to the potential purchasers' low or non-creditworthiness.

This could be seen from the concentration in the residential overhang units which comprises properties priced between RM500,000 and RM1 million (33.6%), followed by RM300,000 to RM500,000 (29.3%) and below RM300,000 (23.5%).

Affordability Conundrum

These are the current price ranges for what could be said to be the entry level purchasers targeting buyers from the mainly B40 and M40 income groups.

Notably, the threshold of mass affordability had long been bypassed by the incremental surge in residential development and pricing structures.

With owning a home never only about the property prices, but also the myriad of additional, operational expenses which adds on to not only the initial outlay needed to purchase a property but also in the monthly payment.

A purchase at the lowest pricing of RM300,000 at its simplest calculation would see the new owner having to pay a monthly instalment of RM1,195 for 35 years and an initial outlay of RM37,500 in upfront payment which includes the downpayment, stamp duty on the Sales and Purchase Agreement, Memorandum of Transfer, and the loan agreement.

Core Economic Issue

Generally, the prevalent perspective is one that the current challenges in unsold properties faced by the housing industry is due to the high prices leading to a supply-and-demand mismatch.

This, while in some respect represents exactly what is happening on the ground, however, distracts from the core issue in how our economic performance have not managed to produce the kind of wages and salaries to be able to afford the base levels of properties.

Developers are themselves face with the dilemma of injecting the affordability agenda amidst a scenario where rising construction costs in land, utilities,

workforce and building materials eat away at whatever margin they can make upon the completion of a project.

Alas, we have gone beyond the point of achieving the right balance and will now be hard-pressed to play catch-up in a situation where the nation could not afford to step in as a financial benefactor to any side.

There is no other route but to tough it out in riding the storm we had seen coming for a while but neglected to take the necessary counter measures to prepare for its arrival and the wake of its predictable aftermath.

Sustainable Walling Solutions

AUTOCLAVED AERATED CONCRETE
CIDB IBS
CERTIFIED

AAC BLOCKS AND PANELS

50% LIGHTER & COST SAVING

Reduces foundation and structural costs by approximately of 25% and 10% respectively for highrise building

ACOUSTICS & INSULATION

HENNER products offer good sound insulation due to its closed cellular structure resulting more comfortable indoor environment.

KIM HOE THYE INDUSTRIES SDN BHD (849519-K)

Building material

Building material is material used for construction. Many naturally occurring substances, such as clay, rocks, sand, wood, and even twigs and leaves, have been used to construct buildings. Apart from naturally occurring materials, many man-made products are in use, some more and some less synthetic. The manufacturing of building materials is an established industry in many countries and the use of these materials is typically segmented into specific specialty trades, such as carpentry, insulation, plumbing, and roofing work. They provide the make-up of habitats and structures including homes.

FLOLINE 3-W[®]

TRIPLE WALL PROFILED HDPE CULVERT

FLOLINE 3-W High Density Polyethylene (HDPE) culverts are designed and manufactured in a unique triple-wall profile construction with smooth internal and external helical walls, through an advanced extrusion-winding process to provide the following advantages:

- ◆ It is superior in quality and performance compared to the common single or double-walled PE pipes available in the market today.
- ◆ It is ideal for underground or aboveground gravity and non-pressure applications in the civil works, waste management, agriculture and aquaculture sectors.

**UNMATCHED STRUCTURE
STRENGTH AND PERFORMANCE**

Drainage System at Mapai Substation, Kanowit

Road Culverts at Jalan Sg. Peking Tinjar, Baram, Miri

On-Site Stormwater Detention Tank at Balai Polis Bongawan, Kota Kinabalu, Sabah

FLOGATE

HDPE FLAPGATE

Specially designed to be used with engineering grade Floline 3-W pipes.

Applications:

Used in agriculture, irrigation, drainage and flood management schemes for any of the following functions

- ◆ Tidal control
- ◆ Prevent backflow in washout lines
- ◆ Prevent intrusion of salt water during high tide

THE LEADER OF ULTRA-HIGH PERFORMANCE CONCRETE (UHPC)

ABOUT US

DURA® Technology Sdn. Bhd. was founded in Malaysia on January 2006. DURA® aims to lead the development of technologies in the building and construction industry of Malaysia and has been awarded with pioneer status on its Ultra-High Performance Concrete (UHPC).

UHPC was patented by DURA® and known as DURA®. DURA® with its high durability, strength and reliable ductility is exclusively used to control cost efficiency. DURA® provides excellent resistance against blasting, high impact loading and abrasion, thus, prolonging wear and tear while eliminating the usage of conventional steel reinforced bars.

DURA® APPLICATIONS OF UHPC TECHNOLOGY

- ✓ BRIDGE
- ✓ CIVIL CONSTRUCTION
- ✓ AIRPORT
- ✓ POWER PLANT
- ✓ HARBOR
- ✓ ARCHITECTURE
- ✓ MACHINE BEDS
- ✓ FLOORING, PAVEMENT & ROAD
- ✓ OFFSHORE
- ✓ ONSHORE
- ✓ EARTHQUAKE
- ✓ RETAINING WALL STRUCTURE
- ✓ DISPOSAL
- ✓ REGENERATIVE ENERGY PRODUCTION
- ✓ UHPC PRECAST AND TILT-UP SYSTEM
- ✓ UHPC CORROSION PROTECTION
- ✓ WEAR PROTECTION
- ✓ VAULTS, ATMs, TERROR
- ✓ MILITARY

ADVANTAGES

Ultra-high performance concrete (UHPC) has several advantages over conventional concrete including improved strength and ductility, reduced permeability, better durability, increased thermal and fire resistance, improved fatigue performance and superior workability. It is also more cost-effective due to its ability to be molded into complicated shapes, while allowing easier and accelerated construction. Additionally, it has a smaller environmental footprint due to reduced concrete usage.

-  Immediate Cost Saving
-  Increase Service Life
-  Minimal Maintenance
-  Life-Cycle Cost Saving
-  Reduce Construction Time & Risk
-  Reduce Global Warming Potential
-  Reduce Material Usage
-  Sustainable Construction

BW YEE SENG STEEL INDUSTRIES SDN BHD

Incorporated in 2009, BW YEE SENG Steel Industries Sdn Bhd has quickly grown to become one of the leading manufacturers of roll formed metal roofing in Malaysia. Being a roof specialist, we understand our customers' needs and always develop the best products to serve our customers. With our well trained workers and state of the art machine, we aim to provide our customers with after, cooler, zero leakage and fashionable roof.

V Truss System is a lightweight and high-tensile steel truss roofing solution. This Comprehensive design is accordance to BS5950: PART 5: 1998 Code of Practice for design of cold-formed sections while it complies with CP3: Chapter V: PART 2: 1972 and MS 1553: 2002 – Wind Load for Building Structure.

In BW Yee Seng Steel Industries Sdn. Bhd., our products are manufactured according to international standards AS 1397 or JIS G 3302. Our innovative and flexible designs ensure safety effectiveness, durability, maximum load bearing strengths and cost competitiveness.

- **LIGHT WEIGHT AND RELIABLE PROFILE SECTION QUALITY**
- **COST EFFECTIVE CUSTOM – MADE DESIGNS**
- **COMPLIANCE AND RELIABILITY IN BUILDING STANDARDS**

Special Pipes:

- Flexible Corrugated (FRCA) (optional)

Special Pipes:

- Reinforced Corrugated (RCCRC) (optional) (DN 100-1000)

Fire Resistant Pipes:

- Reinforced Corrugated (RCCRC) (optional) (DN 100-1000)

GRP Jacketing Pipes:

- DN 100-3000mm
- DN 100-500
- FOR GRP or ALUMINUM CLAD COATING (A/C)
- ISO 9001

FITTINGS:

- All fittings are available

SUPERIOR ECONOMICS:

FARATEC® GRP pipes have 20-40% (proved) higher strength than concrete pipes of up to 50% in weight saving (Prove), combined to offer you optimum

QUALITY CONTROL:

All pipes undergo rigorous quality control inspection prior to use in production. Production control and quality assurance (Call us today) ensuring 100% thickness of pipes as well as 100% compliance (Prove)

Please contact us if you would like to see more about our products or if you would like to place an order.

WHERE RESOURCES AND DEVELOPMENT CONNECTS

EMUM Capital Sdn Bhd is one of Malaysia's longest established trading companies in building materials. We have provided resources for all levels of construction projects, from large commercial landmarks to regular residential homes. To add on to that, we have set our eyes on being a leader in alternative resources as well.

As a main player in the industry, we are keen to develop eco-friendly and value-added products for the whole building sector. Beyond that, we also pursue and create new markets for new business ventures. All this is driven by our ultimate goal of providing sustainable construction solutions - sourced, built and delivered with an environmental conscience.

From iconic landmarks to happy homes - from the cement that supports your footsteps to the roofs that shelter overhead - we look forward to continuing our journey alongside all Malaysians.

Construction industry includes a wide range of constructions suitable for all classes of society.

Commercial construction, domestic construction, industrial construction, heavy or civil constructions are a few examples that are now displaying master pieces of construction technologies. Each of these requires different technological treatments. For domestic construction, simple technological methods are usually preferred and frequently available materials are mostly used. These are mostly low cost projects and are also short-term.

In commercial construction, the basic concern is infrastructure that is responsible for strength and life of project. These are mostly launched by government agencies. These projects require latest construction technologies, equipment, and materials.

BUILDING TECHNOLOGY

The term 'building technology' refers to the technical processes and methods used in the constructing buildings. This has become an increasingly important aspect of the construction industry, as buildings have moved from being evolutions of standard types to becoming one-off prototypes, building performance requirements have become more demanding, and the number of products and specialist suppliers has increased.

In essence, construction is the process of moving and assembling materials and equipment into completed forms for use. However, unlike manufacturing, construction operations are never completely standardised (neither in a fixed sequence nor at a fixed location).

The basic process of construction has remained relatively unchanged since the Middle Ages, however construction technology has changed significantly. The earliest dwellings were built of animal skins draped across sticks, or mud, straw, timber and stone, and were intended purely to provide shelter. Early experiments with concrete were introduced by the ancient Romans, who mixed lime and volcanic rock to build many of their most famous structures.

COMPANY INTRODUCTION

The predecessor of our company was a company named KEE SENG PILING & TRADING COMPANY which was established by the founder cum managing director Mr. Tan Kee Seng in year 1983 and initially provided pile testing for its in-house projects.

In year 2001, it was converted into a limited company to upgrade and expand the Company's business, and since then it has been named KSP TEST PILE (M) SDN BHD.

Meanwhile, Mr. Tan Kee Seng who has vast experience in piling industry has grown into a major pile testing specialists servicing the Local Construction industry throughout Malaysia.

Through the hard work, determination, and leadership from Mr. Tan Kee Seng, the Company's continuous effort to improve and upgrade its standard, growing etc. Since year 2004 to the present, the Company has been registered and has a **Construction Industry Development Board - CIDB** license. (Registration Number: 0720041227-SL 100778)

And in year 2005, SIRIM QAS International Sdn Bhd issued an ISO recognized certificate for **Quality Management System ISO 9001:2015** (Registration Number: MY-QMS 01563) to the Company, this established the Company's recognition in the field of pile testing.

To cater for the needs of more other construction fields, expand KSP TEST PILE (M) SDN BHD's business and enhance the Company's values, Mr. Tan Kee Seng established two subsidiary companies in year 2015 and year 2020, named KSP MACHINERY RENTAL SDN BHD and KSP TRANSPORT SDN BHD (jointly Belonging to **KSP Group**), continuous to provide better services, technical and transportation supports to clients in the field of constructions with energetic staffs.

AIM CONCEPT SDN. BHD.

PROJEK HOSPITAL PASIR GUDANG (REKA & BINA)

ABOUT PROJECT :

PASIR GUDANG HOSPITAL is being developed over a 52acre land which shall serve as the main Government healthcare facilities in the Pasir Gudang locality.

HPG is a 304 bedded (with future expansion to 500 beds) Hospital with 8 Operation Theatres, 24 ICU & HDU Beds, 24 Isolation Rooms and 10 Wards intended to meet the current needs for treatment of general diseases, and to enable modern, qualified, effective and efficient care and treatment of both inpatients and outpatients.

Over a period of 18 months from site possession, HPG has progressed ahead of schedule at 26% progress. This impressive achievement for a Design & Build hospital project is a very rare scenario, testament to the team spirit and accountabilities of all the stakeholders for HPG; JKR, KKM, the Main Contractor, the Consultants, the Local Authorities and the Utilities Providers under the direction of JKR.

HPG is on track for completion by end 2024, providing KKM the much needed facilities to provide health care for the local community and surrounding areas.

IJM CONSTRUCTION SDN BHD

Respected Past.
Responsible Future.

Building inspired cities

For four decades, IJM's Construction Division has been the indisputable cornerstone of our success story. With a track record that speaks volumes, we take pride in consistently delivering solutions that strike the balance between quality, functionality, cost and efficiency.

When we construct buildings that change skylines; when we build houses that people come home to; when we build bridges, roads and rail systems that connect communities; and when we work with our stakeholders as thought leaders to shape the industry, we deliver possibilities to reshape better landscapes that inspire a better tomorrow.

As we celebrate our 40th anniversary, we reflect on the countless possibilities we have brought to life. Each endeavour is driven by our resolute vision and unwavering commitment to excellence, propelling us forward to leave a lasting impact on the world around us.

MCT is established with an objective of enhancing development of a more efficient, reliable, economical and safer construction methodology and environment for the construction industry. Hence MCT is always sensitive to the various technical problems as encountered by an Engineers at their jobsites and it is MCT'S interest to provide solution to Engineers through R & D, manufacturing and international outsourcing, be it construction material, systems or methods.

Our People:

Our people are crucial in the delivery of our services and solution to our clients. In order to ensure that everyone is equipped with the right skill, knowledge and attitude, a comprehensive training programme is put in place to constantly upgrade our people in technical and management skills.

We believe firmly in providing the right training, accredited certification and practical knowledge for our people, in order for them to execute their duties and responsibilities confidently. Our aim is to stay relevant to the every-changing market place and client's requirement.

MASTER REBAR COUPLERS APPLICATIONS:

Reinforced Columns

Extension of Starter Bars

Reinforced Concrete Wall

Post Tension Beam

Bore-Pile Cages

Micro-Piles

Top-Down Construction

Pile Caps

Our service includes the following :

- Post Tensioning System
- Lifting Anchor System
- Precast Concrete Accessories
- Rebarjoin Coupler System (RBJ)
- Grip Coupler System (MGC)
- Mechanical Bolts Coupler System (MBC)

Post-Tension Beam

Ground Anchoring

Rebar Coupler Splicing

Lifting Anchor System

• *Integrated & Comprehensive Facility Management*

Ambang Wira, incorporating sustainability

Provider of total asset management services for the built environment...

A MEMBER OF the AWC Berhad Group, Ambang Wira Sdn Bhd is a premier provider of total asset management and engineering services to building owners, pegged by its trademark commitment to quality, consistency and safety. Delivering ‘sustainable initiatives’ in the built environment to clients at home and abroad, Ambang Wira’s forte is in the key disciplines of:

- Integrated facilities management, nationwide and on a “one-stop” basis, which scope includes energy and utilities, cleaning and housekeeping, environment and air quality, Computerised Maintenance Management Systems (CMMS) for efficiency and effectiveness, fire fighting, landscaping and ground care;
- Building management, i.e., integration of key facility systems that manage electrical distribution, lighting, air-conditioning safety and security.
- Energy conservation, i.e., pro-environment solutions in refrigeration, air-conditioning, light and energy management and control devices for time, pressure, humidity and temperature for a variety of business and industries;
- Our associate company providing automated pneumatic waste collection, using AWC’s proprietary brand STREAM with its breakthrough pneumatic technology to convey municipal or household waste at high speeds via reticulated pipes to a central handling facility that has a proven track record in Malaysia, Singapore and the Middle East as the way forward in sustainable development.

In Ambang Wira’s ever-growing portfolio of successes, amongst several projects such as Putrajaya Galeria, Heriot-Watt University, Bank Negara Malaysia, Hospital Shah Alam Selangor (HSAS), Ministry of Communications and Multimedia Malaysia (KKMM), Ministry of Rural and Regional Development (KKLW), Wisma Putra, the Customs Immigration and Quarantine Complex (CIQ) Johor Bahru, Bintulu Port Authority and Menara Persekutuan Melaka.

Institut Kanser Negara, Putrajaya

Menara PjH, Putrajaya

National Institutes of Health

Active Traffic Construction

Active Traffic Services Sdn Bhd (ATS) has been formed in February 2015, incorporated under the Companies Act 1965, as a private company, on April 2022 changed its name to Active Traffic Construction Sdn Bhd (ATC). Our approach to the public was to provide the quality service in Traffic Management, Construction and Consultation. In ATC, we provide all types of Traffic Management Solution, Safety Equipment, Machineries and Road Maintenance for all type roads throughout Malaysia, especially in the Klang Valley by rental or purchase.

Our ambition in this industry is to provide better management, discipline, work force with effective operating cost and adhered safety requirement at all time with a very efficient implementation.

To achieve the objectives, we are working closely with the relevant authorities specially to improve the Traffic Management standard. We are also embarking and coordinating the services with cost effective and at the same time we want our workforce to be independent dealing with day-to-day activities.

We are striving for excellence to ensure that we can meet the Customers Satisfaction in our entire project that we coordinate, execute and manage. There is always a solution for any problem and thus we are offering one of the Best Solution to resolve the needs in Traffic Management, Construction and Consultation.

NATURE OF BUSINESS

- ◆ Traffic Management Consultation Including Traffic Management Plan (TMP) & Safety Management Plan.
- ◆ TMP Team Including Supply Manpower & Equipment.
- ◆ Road & Highway Maintenance.
- ◆ Design Road & Bridge For JKR.
- ◆ Supply & Install Permanent / Temporary Signboard (JKR AND HIGHWAY SPEC).
- ◆ Hand On Training For Traffic Management / Site Simulation.

EXCELLENT PROVIDER OF GEOTECHNICAL SOLUTIONS

since **1988**

SOIL MECHANIC SDN BHD WAS ESTABLISHED IN MAY 1988 WITH THE AIM OF PROVIDING SPECIALITY SERVICES TO BOTH THE PUBLIC AND PRIVATE SECTORS IN THE FIELD OF GEOTECHNICAL ENGINEERING. WITH MORE THAN 31 YEARS OF EXCELLENT SERVICES TO ORGANIZATION THROUGHOUT MALAYSIA. SOIL MECHANIC SDN BHD IS TRULY A COMMITTED AND TRUSTABLE PARTNER AS OUR ONE GOAL IS TO PROVIDE THE UNPRECEDENTED QUALITY AND VALUE, WITH THE PERFECT SOLUTION.

We are one of the pioneers with fame in the field of:

- ❖ Caisson Foundation
- ❖ Slope Stabilization
- ❖ Geotechnical Instrumentation
- ❖ Micro Piling
- ❖ Foundation Engineering
- ❖ General And High Pressure Grouting
- ❖ Soil Nailing
- ❖ Soil Exploration
- ❖ Rock Anchoring
- ❖ Soil Laboratory Testing

BASED UPON THREE MAIN PRINCIPLES OF OPERATION, NAMELY QUALITY, TECHNICAL KNOW-HOW AND EXCELLENCE SERVICES. THE COMPANY THRIVES ON AND ESTABLISHES ITSELF TO BE ONE OF THE MOST PRESTIGIOUS PIONEERS IN MALAYSIA'S GEOTECHNICAL CONSTRUCTION MARKET.

- Trading & Supply
- Technology & Manufacture

North Soil Engineering was established in 1990 as an enterprise offering specialized services, confined to soil investigation. The company evolved and diversified into other specialized areas of civil engineering works during the latter part of the same decade. Thus, the core business slope strengthening, and rehabilitation works. The other major emphasis was foundation works, namely micro piling, hand dug caisson and bore piling. The company is also engaged in dam foundation treatment such as curtain, consolidation and jet grouting. Nevertheless, the soil investigation arm is an integral part of the business and a significant revenue contributor.

The company is headed by competent management team, assisted by effective administrative support personnel. The site works and projects are managed by engineers, geologist and experienced supervisory staff. The company possess a full range of machinery and equipment to carry out all works to its successful conclusion.'

With the scarcity of land and having to build on areas once considered unsuitable for development had become viable after geotechnical improvement, making it valuable assets. The company's expertise and experience in slope strengthening and stabilization can provide this much needed specialized service. Foundation utilizing micro piles, uniquely suited for structures in confined, built up urban areas shall facilities our participation.

With 30 years of experience we sincerely believe that we are well equipped and positioned to take the opportunities and meet any challenge the future may present.

We shall move forward and prevail.

Specialized in Asphalt premix manufacturing, road paving, Civil Engineering & infrastructure works.

The Petronas Towers structural system is a tube in tube design. This design was done by architect Fazlur Rahman Khan. This technique soon became common for extremely tall buildings.

- Another responsible architect was Argentine-American César Pelli. He designed the towers in a unique post-modern style.
- Planning of this building was first done in 1992 with several tests done. They carried out simulations of wind and structural loads on the design
- The two 88-floor towers were constructed largely using reinforced concrete since the cost of steel was expensive.
- Its façade is made up of glass and steel with Islamic art on it, this is a reflection of the main religion in Malaysia.
- It took 500 truckloads of excavated dirt to create the foundation of the building which was 30 metres below the surface.
- This building used more than 13,200 cubic metres of concrete, the largest ever used in Malaysian construction history.

The current design of the Petronas Twin Towers is not the first design that was proposed. Interestingly, they were all done by Cesar Pelli. The final design was of an eight-pointed star, which in Islamic culture represents unity, harmony, stability, and rationality.

The towers were built on a former race track and about 500 truckloads of the earth were excavated on this site. Concrete was continuously poured at the 30-metre-deep excavation for 54 hours for each tower. The foundation used 13,200 cubic metres of concrete. The final result was twin towers covered in 33,000 stainless steel and 55,000 glass panels. Its pinnacles had 23-segment spires and ring balls consisting of 14 rings of varying diameters.

Construction activity in Malaysia contracted 12.9 percent year-on-year in the December quarter of 2021, easing from a 21.0 percent fall in the prior period and pointing to the second straight quarter of drop, amid ongoing disruptions caused by the pandemic. Softer decreases were seen in residential buildings (-18.2 percent vs -24.9 percent in Q3), non-residential buildings (-7.1 percent vs -10.4 percent), and civil engineering (-20.3 percent vs -29.7 percent). At the same time, special trade activities grew faster (22.5 percent vs 21.0 percent). For full 2021, the construction output fell by 5.0 percent.

In Malaysia, construction output refers to year over year change in the output within the construction sector, including building construction and civil engineering.

The construction industry is a vast and sprawling field that evolves alongside society. The more society grows and innovates, the more the construction industry will follow.

Malaysia Construction Market was valued at USD 17.2 Billion in 2020 and is projected to reach USD 25.81 Billion by 2028, growing at a CAGR of 5.3 % from 2021 to 2028.

WAN HUSIN & ASSOCIATES SDN. BHD.

Wan Husin and Associates Sdn Bhd (WHASB) are a 100% Bumiputera owned multi-disciplined Engineering Consultancy firm registered with the Board of Engineers that has been established since 1988 and proud to be “Engineered in Malaysia”.

We have been offering our engineering services to an impressive list of Government, Government Linked Companies (GLCs), Public Listed Companies (PLCs) and Multinational Corporations (MNCs), providing a wide range of expertise encompassing all principles of design and construction consultancy.

We focus on large scale developments, with a track record of closely working with leading international engineering companies to deliver

some of Malaysia’s most intricate and national enrichment projects.

Our Engineering Consultancy includes; civil and structure, geotechnical and geological, hydrology as well as mechanical and electrical engineering consultancy.

Our service includes Engineering Design, Design Review and Checking, Construction Supervision, Independent Checking Engineer (ICE), Principal Submitting Partner (PSP), Auditing, Assessment, Project and Construction Management and Feasibility Studies.

With a formidable staffing size of over 160 Engineers, Designers and Draftsman including sixteen (16) Professional Engineers (IR) in various areas of expertise.

GEONAMICS (M) SDN. BHD. TESTING SERVICES OVERVIEW

Geonamics provides almost a full range of testing services in geotechnical engineering works. A large spectrum of engineering testing, instrumentation, monitoring services spanned from pre-construction stage, to during construction stage and the latter post-construction stage are offered by Geonamics.

We covers numerous field and laboratory test and instrument monitoring services. Quality Control Assurance with our experienced Professional Engineers and qualified engineering staffs, we always strive with one common objective: professionalism and reliability in our testing services. Geonamics is constantly embracing new technologies and innovation and to ensure the test services are fully complied to the each latest test standard. The quality control complies in full to ISO 9001 standards and a range of testingservices are also accredited by Standard Malaysia (SAMM).

Our Services

- Ground Investigation & Geophysical Tests
- Construction Materials Testing
- Low-Strain Dynamic Load Test & Cross-hole Sonic Logging Test Pile
- High Strain Dynamic Load Testing of Deep Foundation (HSDLT)
- Calibration of PDI Strain Transducer for HSDLT
- Rapid Pile Load Test
- Geotechnical Instrumentation & Monitoring
- Bidirectional Pile Load Test
- Shaft Area Profile Evaluator

GENERAL DESCRIPTION

Our company was established to provide professional engineering design services based on the latest state-of-the-art technology. In line with the government policy, we are indebted to provide endless employment opportunities for the people. In addition, we are also interested to work in collaboration with renowned companies (International and Local), The Sarawak Government for future development of Sarawak in particular and Malaysia in general.

SERVICES

The firm provide a broad spectrum of Civil and Structural engineering services wick includes:

Civil Engineering - Roads and highways, bridge, ferry ramp, pontoon, wharf and jetties, water supply and resources, infrastructure for housing, industrial complexes, irrigation work, sewerage, township and land development.

Structural Engineering - Multi-storey commercial office complexes, housing development, residential apartments, training institution, college and university mosque and religious complex and industrial complex.

FIELDS OF SPECIALISATION

CIVIL STRUCTURAL, MARINE ENGINEERING, WATER SUPPLY, HYDROLOGY, GEOTECHNICAL AND PROJECT MANAGEMENT

Anchored with over 20 years of experience in multidisciplinary innovation projects, the team at North Consult Engineering successfully established their presence in Malaysia, Australia, China, Philippines, Fiji, Papua New Guinea, Bangladesh, Vietnam and Taiwan. Recognised for our strong innovation skills and helmed by a team of competent professionals, our expertise and skills lie in engineering consultancy, with exclusive focus in electric utilities and power plant industries, amongst others.

We stand firm in our commitment to quality, and excellence and accuracy in our delivery of engineering consultancy services, primary focus in solar energy solutions. We place utmost priority to our client's business needs and objectively strategies creative solutions which are relevant and cost effective.

We invest in resources to identify project requirements and take pride in journeying with our clients through each development stage to bring clarity to issues and solutions that are optimal, sustainable and cost effective.

OUR CAPABILITIES

Consultancy

Our core strength lies in providing consultancy services in the sector of hydro and thermal power generation, specialising in solar power for renewable energy. Other key fields of focus are transmission and distribution, roads and transportation, regional development and infrastructure. We are qualified consultants approved by Suruhanjaya Tenaga to carry out the Power System Study (PSS) for the power generation industry.

Project Management

We take the lead in professional technical design and project management services to a diverse range of commercial and industrial industries, covering renewable energy, transmission and distribution, infrastructure of roads and transportation. Our commitment to timely delivery of projects have made us one of the sought-after consultants in Malaysia.

SOFTWARE CAPABILITIES

- Siemen PTI PSS[®]E version 33 and above
- ETAP Power System Software
- AutoCAD – Drafting engineering software
- PVSYST - Photovoltaic systems software
- ETAP eMTP – Electromagnetic Transient Program
- AGI 32 Lighting Analysts - Illumination Engineering Software
- Helioscope - Advanced Solar Design Software

OUR SERVICES

ELECTRICAL SERVICES

- Transmission and Distribution system Design up to 275kV system
- Large Scale Solar Photovoltaic Plant
- Power System Study
- Primary and Secondary Substation Design
- Building Services (ELV and Lighting system)
- Infrastructure (Street Lighting system including electrical reticulation to traffic control and monitoring system)
- Earthing and Lightning protection Design
- Testing and Commissioning on large-scale project

MECHANICAL SERVICES

- Air Conditioning / Chiller System
- Fire Protection System
- Mechanical Ventilation System
- Cold / Hot Water & Sanitary
- Industrial Vacuum System
- Existing Plant Mechanical Process and System Design Optimization
- Mechanical Audit Services for Industry Standard Compliances

RUNDING TRAFIK MZK SDN BHD (774116-A)

TRAFFIC AND TRANSPORTATION PLANNING CONSULTANTS

Runding Trafik MZK Sdn Bhd is a local Malaysian company and provides professional consultancy services in traffic and transportation planning for the government and private sector in Malaysia.

Since its establishment, the company has successfully completed numerous traffic and transportation planning studies for the private sector in Malaysia.

Runding Trafik MZK Sdn Bhd is a specialist company with a comprehensive range of skills, expertise and experience that is committed to provide a high standard of service to its valued clients. The principals of Runding Trafik MZK Sdn Bhd have been providing traffic advice to government and private sector for more than 25 years.

COMPANY SERVICE

Development Projects

- Traffic Impact Assessment (TIA) Studies
- Pedestrian, Cyclist and Disabled Facilities
- Car Park Planning
- Public Transport Planning and Access
- Traffic Signing and Circulation
- Traffic Aspects for Planning Approval

Public Transportation Planning

- Bus Terminal Planning and Design
- Bus Route Planning And Operations
- People Mover System Planning
- Light Rail Transit Planning

Transport Studies

- Township Masterplan
- Local and Structure Plans
- Strategic Transport Masterplan

Highway and Traffic Engineering

- Interchange and Signalised Junction Design
- Traffic Control and Surveillance
- Traffic Management Schemes
- Traffic Sign and Road Marking

Eco-friendly building materials have a positive impact on both the environment and human health. I sincerely hope that this list has been instructive and useful in assisting with future ecologically conscious decision-making.

Using green technology in construction is linked with software, items, or methods used for constructing green buildings. It can have a lower-than-average impact on the planet.

Green construction technology can give you a competitive edge. It reduces your impact on the world and improves the life of the building you constructed. Here are other benefits of adapting to green building construction practices.

To be a leading building and civil engineering solutions provider by practicing efficient systems and using efficient technologies where best practices meet the highest qualities and standards.

Malaysia Construction Market Size And Forecast

Malaysia Construction Market was valued at USD 17.2 Billion in 2020 and is projected to reach USD 25.81 Billion by 2028, growing at a CAGR of 5.3 % from 2021 to 2028.

Ongoing infrastructure development, growing residential and non-residential projects, government policy of vision 2020 has pushed up demand for the Malaysia Construction Market. The Malaysia Construction Market has significantly contributed to Malaysia's gross domestic product and socio-economic growth. The Malaysia Construction Market report provides a holistic evaluation of the market. The report offers a comprehensive analysis of key segments, trends, drivers, restraints, competitive landscape, and factors that are playing a substantial role in the market.

Construction is the process of bringing together various components to make a building for a specific location using a comprehensive concept and plan. Construction activity involves manufacturing and trade concerned with the components for making building, maintenance, and restoration of structures. Drilling and strong mining discovery are examples of this. The construction industry in Malaysia is a vital and active field of the economy. Malaysia, as a developing country, has recognized the importance of the construction sector in both economic development and enhancing the quality of life and living standards of Malaysians. Almost any construction project can be narrowly classified into one of three types, Buildings and houses, Public works, and Industrial-type structures.

ABOUT US

In 2003, our company embarked on its journey as a specialist in constructing extruded cast in-situ concrete road kerbs. Since then, we have diversified our capabilities to encompass a range of infrastructure endeavours, including drainage work, road construction, and other related projects.

Before our company's incorporation on October 20th, 2020, kerbing works were carried out under the expertise of our Founder, Mr. Liew Kah Sin. With over 20 years of experience in infrastructure construction and a focus on various workfronts, Mr. Liew Kah Sin played a crucial role in the field.

FEDERAL ROAD CONSESSION COMPANY

Total Quality Road Maintenance Solutions

Roadcare (M) Sdn. Bhd. was officially established in August 1999 and proudly operates under Protasco Berhad, its parent company. More than 20 years of expertise in the road maintenance industry.

Roadcare (M) Sdn. Bhd. is a licensed Grade G7 contractor with the Construction Industry Development Board (CIDB). The company received ISO 9001:2000 certification in 2006 and has since been updated to ISO 9001:2015.

Currently Roadcare (M) Sdn. Bhd. maintains approximately **7,200 kilometres of the federal road network for the Central and Eastern Zone of Peninsular Malaysia**, which comprises the states of Selangor, Pahang, Terengganu, and Kelantan.

OUR MAINTENANCE SERVICES

ROUTINE WORKS

Carried out on a cyclic and need basis to meet the requirement.

PERIODIC WORKS

The works include scheduled pavement rehabilitation works and unscheduled repair works. They are classified as minor reconstruction and maintenance projects.

EMERGENCY WORKS

WE'RE GETTING SOCIAL

03-9285 2257

PAVEMENT QUALITY CONTROL

"We provide engineering infrastructure solution for a better life quality"

Road Scanner for measuring International Roughness Index (IRI)

Falling Weight Deflectometer (FWD) to estimate pavement structural capacity

PQI device for accurate asphalt pavement density

Roadline marking testing using Retroreflectometer device

SPECIALTY MIX

Company Background and Our Profile:

Experienced since early 2006 in civil and structural engineering works, we believe we are the pioneer and are in the path to be labelled as formidable force in the construction industry as our services not merely confine to our expertise in project engineering but also to provide exceptional design ideas, maintenance services, mechanical and electrical necessity.

Our praised completed construction works have the quality of international standard which includes various construction projects ranging from infrastructure, industrial, commercial and residential (landed and high rise), amongst others include big scale theme park, hotels, shop lots, offices, factories, warehouse, governmental buildings, international school and university.

Our Philosophy, Mission and Vision:

Our born bone base philosophy and working culture has always been and still is "If there's job to be done, finish it well". We always conscientious towards our vision of **"SOUGHT FOR OUR KNOWLEDGE, SELECTED FOR OUR PERFORMANCE"** in the construction industry.

We have completed many projects over the years to the satisfaction of our clientele even for job that require the most stringent standards. We strive to prove that we are able to provide quality value engineering with assurance of strong and firm financial reliability and abilities to achieve balance in aesthetics and cost efficiency with timely delivery capabilities.

Outstanding Achievement:

We hold-fast to the criteria of 'time is money' in ensuring the successful completion of construction and development projects. We possessed, amongst others, a strong skilled workforce which we constantly trained to improve their skills. We pay attention to well management and safety at construction sites all the time to achieve expeditious completion of construction projects without hindrance.

We were awarded with the 'ASEAN Most Recognized Brand in Integrated Building System and Construction Excellent Award' in year 2016. This 'Excellent Award' is truly a recognition of our performance in the industry. We are confident and able to assure our clientele that their decision of us is not regrettable. We also humbly express our appreciation to our formal, existing and future clientele in proving that we are able to continue to be the pioneer in the construction industry.

EMPAYAR INDERA SDN BHD

ABOUT US

Empayar Indera Sdn. Bhd. (EMPAYAR) is incorporated since July 2011 and we have provide quality services for over 10 years. EMPAYAR is a subsidiary of Protasco Berhad focusing on road maintenance, operation, rehabilitation and construction. EMPAYAR has been entrusted by the state government of Perak to maintain Perak State Road and Perak Agriculture Road under the administration of Jabatan Kerja Raya Negeri Perak (JKR) and Jabatan Pengaliran Saliran (JPS). The long-term contract with JKR was for a period of 7 years beginning from January 2013 - December 2019. Meanwhile, the long-term contract with JPS was for a period of 2 years beginning from March 2017 - February 2019. The contract period with JKR and JPS extended till 2026

VISION

“ To sustain as a provider of maintenance services and infrastructure construction management in MALAYSIA”

“To be able to provide customizable products and services with sustainable growth through QUALITY work environment.”

MISSION

To boost customer’s satisfaction and loyalty through creative solutions.

To continuously develop workforce talents and performance competency.

To promote and encourage effective safety & health measures through the provision of quality, accessibility and affordability of our services.

To enhance financial value through market and product diversification.

SCOPE OF WORK

01. ROUTINE MAINTENANCE

- RO 1 PAVEMENT
- RO 2 ROAD SHOULDER
- RO 3 GRASS CUTTING
- RO 4 ROAD FURNITURE
- RO 5 BRIDGES & CULVERTS
- RO 6 DRAINAGE
- RO 7 ROUTINE INSPECTION

02. PERIODIC MAINTENANCE & NON-PAVEMENT MAINTENANCE

- 1. PAVEMENT STRENGTHENING
- 2. PREVENTIVE MAINTENANCE WORKS
- 3. REPAIR & REPLACE DAMAGED / MISSING ROAD ITEMS
- 4. MINOR REPAIR WORKS
- 5. SLOPE & EMBANKMENTS REPAIR

03 EMERGENCY WORKS

PROVIDE RAPID RESPONSE EMERGENCY SITUATIONS

- 1. TRAFFIC MANAGEMENT
- 2. TEMPORARY TRAFFIC DIVERSION
- CLEARING OF DEBRIS &
- 3. MATERIALS

04 ASSET MANAGEMENT

- 1. PAVEMENT MANAGEMENT
- ASSES DEFECTS, ROAD IMPROVEMENT & PROPOSE A MAINTENANCE BUDGET REQUIREMENT

We focus on building and infrastructure works, as well as the construction, rehabilitation, upgrading, operations and maintenance of roads and highways, providing one of the most advanced road recycling technologies to date.

HCM construction activities have contributed to nation-building and infrastructure developments. Our expertise lies in the design, building construction, upgrading and rehabilitation of road and bridges. We can provide alternative design and construction using Industrialised Building System such as shear wall and precast slab system to expedite the works. HCM has undertaken, completed and managed more than USD 2 billion worth of construction and project works, including high rise building contracts worth more than RM1 billion.

HCM's expertise in roads and pavements allows HCM to address different clients' requirements by applying various approaches and techniques depending on the type of distressed road conditions in both rural and urban areas.

OUR VISION

To be a leading building and civil engineering solution provider by practicing efficient systems and using efficient technologies where best practices meet the highest qualities and standards.

OUR MISSION

To implement and lead engineering success in areas of expertise:

- Building and Infrastructure Works
- Road Construction, Rehabilitation & Maintenance
- Recycling Technology
- Geotechnical Works
- Slope Remedial & Repair Works
- Engineering Services & Consultancy

CORE BUSINESSES

1. Building And Infrastructure
2. Bridges
3. Road Construction
4. Road Rehabilitation
5. Road Maintenance
6. Geotechnical
7. Slope Maintenance
8. Recycling Technology
9. Plant & Machinery

*Company***SERVICES & PRODUCTS**

Diversify its services & products through comprehensive competency capability development and the ability to offer Integrated Facility Management (IFM) services uniquely designed to meet each client's expectations.

Integrated Facilities Management Services

- Operation & Maintenance (O&M) for Mechanical & Electrical, Civil & Structure System
- Cleaning Services
- Landscaping Services
- Car Park Management
- Security Management System
- Energy Management
- Vibration Analysis (VBA)
- Infra Red Thermography
- Refurbishment Works
- Energy Efficiency Renewable Energy (EERE)
- Upgrading Works
- Building Management System (BMS)
- Testing and Commissioning

Our Vision

Leading World-Class Total Facilities Management Services and Engineering Solution Provider.

Our Mission

To deliver highest standards of performance in Facilities Management services and Engineering solutions to our clients by providing quality and efficient services.

**Facility Consultancy & Advisory Services**

- Certified Competent /Service Engineer Services
- Supervision of Third Party Contractors
- Energy Audit
- Energy Efficiency Program
- Performance Contracting
- Renewable Energy & Co-generation
- Project Management Services

SERADA REALTY SDN. BHD

COMPANY PROFILE

"BUILDING THE NATION OF TOMORROW"

ABOUT US

SERADA REALTY SDN. BHD is a wholly owned Bumiputera company incorporated on 8th September 1984. The company was founded and headed by Puan Sri To' Puan Hajjah Nariah Binti Muhamad a seasoned and experienced businesswomen with professionals in construction field. These professionals are selected from the background particularly in construction to handle present or future project.

OUR VISION

- Building the company name to be one of the leading contractors worldwide
- Diversified the company into multi-disciplinary construction
- Building a mega structure which can be appreciated by generations

OUR MISSION

- To provide clients with a reliable and high quality of services and products
- To provide clients with new approaches, creative ideas and innovative engineering solutions
- To deliver all projects as per schedule and achieve the pre-state quality

FREYSSINET

The specialist Contractor to the Construction Industry

THE ACTIVITIES OF FREYSSINET PSC [M] SDN BHD

Prestressing services for Post Tensioning

- All types of In-Situ/Precast Concrete Bridges
- All types of Building Structures – Car Park, Retail and Transfer Plates
- Circular Structures [Silo, Reservoir & LNG Tank]
- Stay Cable

Bridge Construction Technology

- Travelling Formwork Systems
- Incremental Launching Systems
- Launching Girders

Structural Repairs

- Structural Monitoring [SHMS]
- Bridge & Jetty Repair and Strengthening Works
- Carbon Fibre [TFC – Repair Application]
- Bearing Replacement

Structural Bars / Bridge Fittings

- Freyssibar [Prestressing Bar's]
- Mechanical/Rubber Bridge Bearings and Expansion Joints
- Epoxy Products

Heavy-Lifting

- Controlled Lifting and Moving of Heavy Structures
- Strand Jacks [Power Pack]
- Flat Jacks

Monitoring Systems [SHMS]

- Scanprint [Monitoring Software] [Varies Type of Sensors]
- Soundprint
- Sixense Environment/Traffic Movements/Forces/vibrations

SQ ENGINEERING SDN BHD (968267-U)

NATURE OF WORKS

SQ ENGINEERING specializes in supplying labour for:

1. Bored Pile Works

Types of Bore Pile

- Bore Pile (from 1200mm ϕ to 2200mm ϕ)
- CBP Wall (from 600mm ϕ to 1050mm ϕ)

Scope of Works:

- Concreting Works
- As Banksman – changing boring buckets
- Ad Hoc Work like Caliper test and Air Lift Work
- Test Pile Works

2. Reinforced Concrete Works

Scope of Works:

- Substructure
 - Beams concrete, reinforcement bars and formwork
 - Pile caps concrete, reinforcement bars and formwork
 - Pad footings concrete, reinforcement bars and formwork
 - Raft foundations concrete, reinforcement bars and formwork
 - Lift pit foundations concrete, reinforcement bars and formwork
- Superstructure
 - Lift wall concrete, reinforcement bars and formwork
 - Upper Floors Work: Slabs concrete, reinforcement bars and formwork
 - Frame Works: Beams and columns concrete, reinforcement bars and formwork

- Starter bars

3. Precast Panelling

Scope of Works:

- Supply of Labour, Tools and Equipment for the installation of Precast Wall Panels

4. Temporary Strutting

Scope of Works:

- Supply Labour, Tools and Equipment for Temporary Strutting Works to support CBP wall

5. Other Labour Supply

List of Labour works:

- General Worker
- Welders
- Skilled Workers
- Semi skills Workers

6. Rental of Equipment and machinery

List Type of Machineries:

- Mini Excavator/Excavator with Breaker
- Generator Set
- Welding Set
- Skid Steel Excavator (Bobcat)
- Mini Excavator/Excavator
- Long Arm Excavator
- Mobile Crane
- Crawler Crane
- Boring Machine (Hydraulic Drilling Rig)

List Type of Equipment and Tools:

- Water Tank
- Steel Plate
- Water Pump
- Others

7. Miscellaneous Works

Scope of Works:

- Ad Hoc Assignment; Repairing, Fixing and Maintaining:
 - Small size project like Rectification and Renovation Works
 - Repairing tools and Equipment.
 - Welding work like constructing Wash Trough Steel Frame.
- Other Projects:
 - Skim Coating
 - Temporary Sheet Pile Works
 - PU Grouting
 - Pressure grouting work

THE COMPANY

Founded in Jan 1995, by Ir. Winson PT Lee, PTL TECHNOLOGY SDN BHD (PTL) has been actively involved in the design, supply and installation of medical, industrial and laboratory gas reticulation system.

THE INDUSTRY LEADER IN MEDICAL GAS

PTL manufactures their own range of medical product such as Bed Head Panel, Wall Panel, Area Valve Service Unit and many gas related application

LINKABLE LOCK VALVE

MEDICAL PIPE BRACKET

MEDICAL RAIL

AVSU MODULE

FLOW METER

VACUUM REGULATOR

WALL PANEL

PATIENT HIGH DEPENDENCY FIXED SERVICED COLUMNS

PORTABLE OXYGEN THERAPY DEVICE

X-RAY VIEWER

RIGID PENDANT

OPERATING THEATER CONTROL PANEL

MEDICAL GAS ALARM

HORIZONTAL BED HEAD PANEL

THE MISSION

We strive to be a strong provider of Medical Gas Reticulation System in design and installation. We aim to continue to provide quality Medical Gas System and great after-sales service to our clients.

ARTICORP PILING SDN BHD (512536-H)

Articorp Piling Sdn. Bhd was incorporated in April 2000 under The Company Act of Malaysia, 1965. In principal a general contractor specialize in various type of piling works. Such as

- All types of driven pile for RC Pile, Spun Pile
- Jacked in Piling System
- Pre-Boring
- Piling Works with A-Frame
- Sheet Pile
- Micro Pile

We also carry out various pile load Test and integrity Test methods on piles installed

- High strain Dynamic pile testing (PDA Test)
- Low Strain Dynamic pile Testing (PIT Test)
- Static Maintained Load Test (MLT Test)
- Mackintosh Test

Since its inception, the company has successfully completed numerous projects in various parts of the country.

Your Reliable Design & Build Contractor

We provide engineering solutions in geotechnical, structural and foundation engineering

MENAWAR RESOURCES SDN BHD (718637-W)

Our company has been established more than a decade, specializing in Construction and Maintenance of Landscaping Works (Softscapes and Hardscapes), Public Cleansing Services and Facility Management.

With diverse landscape services to choose from, we are driven to provide the highest quality solutions for you.

“We are willing to take any challenging landscaping project of various sizes and types as conventional projects.”

OUR SERVICES

Our competitive advantage is the integration of quality services for clients and field experience.

We provide a comprehensive range of landscaping services such as :

- Landscape Construction (Softscape & Hardscape)
- Landscape Maintenance (Softscape & Hardscape)
- Public Cleansing Services
- Facility Management

By educating clients on the services we provide, we are building trust and satisfaction of service qualities.

Our environment is a glorious place. It is full of wonder and splendor. Unfortunately, the more the population grows the more we continue to cause harm to the environment.

With information comes the power to restore our environment. The more we are aware of existing environmental facts, the better placed we are to take the necessary action to make sure our environment is protected.

Around 27,000 trees are cut down each day just to produce toilet paper. The world has over 3.04 trillion trees in the world. However, 27,000 of them are cut down daily to make toilet paper. This translates to about 9.8 million trees annually.

100 acres of rainforests are cut down every minute. Rainforests are being cut down at a rate of 100 acres per minute. If this trend continues, the world's rainforests will be gone by 2100.

Only less than 4% of American forests remain today. The majority of trees in American forests have been cut down for building and fuel. Interestingly though, the world's oldest trees are 4,600 years old and grow in the US.

5 million tons of oil end up in oceans. About five million tons of oil produced in the world end up in oceans every year.

78% of marine mammals at risk of choking on plastic. Seventy-eight percent of marine mammals are at risk of accidental deaths, such as getting caught in fishing nets.

Plastics killing over a million sea animals annually. Plastic bags and other plastic garbage that ends up in the ocean kill over 1,000,000 sea animals every year.

Greenhouse gases contributing to global warming. Methane, water vapor, and carbon dioxide are the most common greenhouse gases. When their levels are too high they contribute to global warming which results in the melting of the ice caps, rise in sea levels, desertification, droughts, floods, forest fires, and heatwaves.

Beef is one of the biggest causes of deforestation. Cows require 28 times more grazing land as compared to pigs or chickens. Cattle ranching contributes to deforestation turning one-fifth of all pastures and ranges into deserts.

Humans use only 1% of all available water. About 71% of the earth is water. The oceans hold approximately 96.5% of this water and the ice caps hold about 2%. The remaining water exists in rivers, ponds, glaciers, ice caps, lakes, as water vapor and our taps, among other water bodies. Only 1% of the earth's water is safe for human consumption.

A brand is a personality that identifies a product, service or company, including **a name, term, sign, symbol or design.** A brand also represents the relationships between customers, staff, partners, investors, and so forth.

A brand does not exist within a company or organization. **A brand exists in the minds of your customers.** A brand is the sum total of impressions a customer has, based on every interaction they have had with you, your company, and your products.

GIBS GREEN INTEGRATED BASE STABILISER SDN BHD (1405534-W)

Our vision is to be recognized as pavement-stabilizer materials manufacturer in promoting efficient use of eco-friendly processed materials, **GREEN THE FUTURE.**

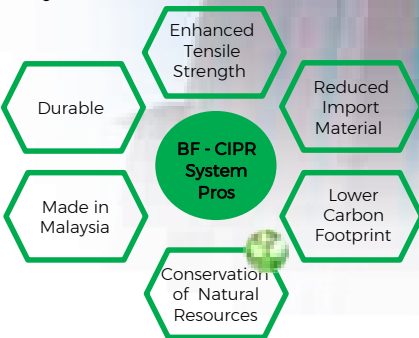

Green Integrated Base Stabiliser Sdn. Bhd. (GIBS) is a Malaysian incorporated company specializing in manufacturing a wide range of quality improver binder material for subgrade soil stabilization product. This quality improver binder contains eco-friendly materials for construction of long-lasting and durable performance pavement that varies from muddy road, heavy traffic highway, to heavy loaded transportation hub. The utilization of eco-friendly material offers environmental advantages toward conservation of natural resources.

The safe and smart way of concrete solution

Concrete Reinforcement Why Dramix® Steel fiber?

- ✓ Easy application & speed up project up to 30%
- ✓ High fatigue resistance & excellent impact resistance floor
- ✓ Innovative solution with proven records
- ✓ Professional technical support

Concrete Waterproofing Why CWS100® ?

- LEAK-FREE WATERPROOFING. ALWAYS!**
Single application waterproofing that lasts for the design life of the structure.
- SUPER-FAST APPLICATION**
Up to 6000m² per day compared to 100m² for a membrane. Trafficable, 6 hours after application.
- ENVIRONMENTALLY FRIENDLY**
Non-toxic. No VOCs. Can earn LEED points.

MITSUBISHI ELECTRIC. QUALITY YOU CAN BELIEVE IN.

OUR **4** PILLARS OF DURABILITY

TESTING FOR HARSH CONDITIONS

Extreme tests on our air conditioners confirm that our designs are built to last.

MANUFACTURING OUR OWN KEY PARTS

Our design and engineering expertise is applied to manufacturing key parts such as the compressor and inverter.

QUALITY CONTROL FOR THE REAL WORLD

All products are inspected to ensure that your air conditioner works just as well at home as it does in our factories.

OVER 60 YEARS OF INNOVATION

Our history as a pioneer of air conditioner technology is proof of the durability of our products.

Global Clean Air Solution
Provider for Over 100 Years

FILTER RANGE

TOTAL GAS PHASE SOLUTIONS

AAF offers a wide range of gas phase filtration solutions and products that are most suited for efficient removal of almost all types of harmful environmental contaminants.

TOTAL CLEAN AIR SOLUTION

AIR PURIFICATION SYSTEMS

AAF fresh air and purification system offers a plug-and-play solution to improve indoor air quality in applications such as healthcare facilities, school classrooms, and commercial real estate.

NUCLEAR GRADE CONTAINMENT SYSTEMS

AAF offers multiple containment systems which are meticulously designed to minimize exposure risks, improved accessibility, and optimized quality and performance.

AHU FILTERS SOLUTIONS

AAF is able to provide filters of various grades and specifications to be installed in your AHU, ranging from primary filters to HEPA filters, as well as chemical filters.

CLEANROOM MODULES

AAF offers a broad range of matching cleanroom modules and components installed with HEPA/ULPA filters that accommodates your indoor air quality needs.

HEALTHCARE SOLUTIONS

AAF provides multiple solutions to reduce the risk of airborne transmissions and to ensure the safety of all medical staff and patients.

KITCHEN ECOLOGY SOLUTIONS

AAF Kitchen Ecology Solution offers 3-in-1 solution such as smoke, grease, and odour removal technology to filter contaminants before exhausting to the environment.

GAS-PHASE FILTRATIONS

AAF has a wide range of gas-phase filtration solutions and products that are most suited for efficient removal of almost all types of harmful environmental contaminants.

SOME LIKE IT COOL.

The compact Amarex KRT is now suitable for an even greater variety of applications. With new motor sizes from 10 to 60 kW, the waste water pump meets additional requirements. And thanks to its cooling jacket, the pump can even be used for dry installation.

<https://www.ksb.com/en-my>

► **Our technology. Your success.**

Pumps · Valves · Service

Amarex KRT – Jacket-cooled Waste Water Pump

1 Various Sensors

- Permanent monitoring to ensure trouble-free operation
- Prepared for teleservice (remote data monitoring).

2 Motor

- Long service life.
- High efficiency.
- Easy to service.

3 Closed cooling system

- Optimum cooling under all operating conditions.
- No external cooling required.

4 Safety

Absolutely water-tight resin-sealed cable entries prevent any water from entering the motor – even in the event of a damaged cable.

Suitable for worldwide use

Motors conform to international standards.

Flexible installation

Stationary guide wire installation

Stationary guide rail installation

Transportable

Dry installation

Technical data

Sizes	up to DN 700
Flow rate	up to 10,080 m³/h
Head	up to 120 m
Temperature	up to 40 °C
Automation available	

Subject to technical modification without prior notice

Mr. Yeo SC
Group Managing Director

Mr. Yeo graduated from the University of Singapore in 1977 with a Bachelor degree in Mechanical Engineering. He Joined OYL Condaair Industries Sdn. Bhd. (a JV and licensee of York USA) in 1977 as a Production Engineer / Quality Controller and served for a period of 10 years, during which he was promoted to Production Manager in 1980. He was then Promoted to Marketing and Production Manager in 1982 and later became the Marketing as well as Engineering Manager in 1984 and held these positions until January 1988.

In January 1988, Mr. Yeo founded Topgroup Holdings Sdn. Bhd. together with 8 other local shareholders. He was then appointed Managing Director of the company and the Group. In the same year, a subsidiary company named Topgroup Industries Sdn. Bhd. was established as a licensee and JV partner to Dunham Bush Inc USA, to manufacture airconditioning equipment and electric chillers under the "Dunham-Bush" brand name. Another subsidiary company :Dunham-Bush Sales & Services Sdn. Bhd." was also established as a distributor of imported Dunham-Bush rotary screw chillers and the locally manufactured Duham-Bush Products. During The period from 1988 to early 1992, various other subsidiaries and JV companies were also established; such as Topgroup Polace! Sdn. Bhd. to manufacture cooling towers, Topgroup DATA-AIRE Sdn. Bhd. to manufacture Precion and close-controlled airconditioning equipments, Topair Industries Sdn. Bhd. to manufacture residential type air-conditioners, Topair Sales & Services Sdn. Bhd. to market and distribute "Topair" brand of airconditioners and Topgroup M & E Services Sdn. Bhd. to handle repair, preventive maintenance and retrofitting of airconditioning, equipment and systems.

In 1992, Berjaya Singer Berhad acquired majority control of Topgroup. In 1994, Topgroup Holdings was listed on the KLSE Second Board. In January 1995, Topgroup holdings Berhad successfully completed the acquisition of Dunham-Bush Inc USA and all its overseas subsidiaries. Topgroup Holdings Berhad then change its name to Dunham-Bush (Malaysia) Berhad and became a global company with manufacturing operations not only in Malaysia, but also USA, UK and China. All this while, Mr. Yeo continued to lead the global group as Managing Director and CEO until 30th June 2007, after which a Russian group took majority equity control of the group. On July 1, 2007, Mr. Yeo was made the Executive Chairman of Dunham-Bush Malaysia Berhad while he continued as Managing Director for all the local Malaysian subsidiaries until 10th May 2008 after which Mr. Yeo left the Dunham-Bush Group.

With more than 45 years of experience in manufacturing, engineering, sales, service and contracting in the HVAC & R industry, Mr. Yeo will provides an invaluable leadership and guidance to the Group's companies to ensure our valued customers are fully satisfied with the goods and services that we offer.

ASTA FULL TYPE TEST : IEC 61439

Verified by testing in accordance to IEC Standards

- | | | |
|---|--------------------------------|----------------|
| • | LV Switchgear & Controlgear | IEC 61439 |
| • | Degree of Protection | IEC 529 |
| • | Internal Arc Fault Containment | IEC 61641 |
| • | Resistance to Salt mist | IEC 60068-2-11 |
| • | Resistance to Damp heat | IEC 60068-2-30 |

ELECTRICAL

- Short circuit performance able to achieve up to 125kA for 1 second (275kA peak)

HIGH PERFORMANCE

- Up to Form 4b form of internal separation
- Ingress Protection up to IP44

MODULAR

- Compact and flexible modular design conserves maximum space
- Customisable to special dimensions according to customer preferences

REGULATORY COMPLIANCE

- ASTA certified and compliant to IEC standards 61439-1, -2; designed to meet local technical standards, practices and requirements

MECHANICAL STRENGTH

- High turn frequency of frame structure ensures greater mechanical strength and toughness

FULLY KNOCK-DOWN

- Allows for easy dismantling and assembly; parts are joined by bolts and nuts, which eliminates need for welding process

EFFICIENT SPACE UTILISATION

- Small footprint allows for compact and efficient space utilisation; facilitates front and back access

SAFETY

- Naturally ventilated, option to insert additional fans for greater heat dissipation
- 100% quality check before delivery
- Use of insulated copper busbars prevents risk of short-circuit

www.japanairfilter.com Japan Air Filter Group

Building a Legacy of Excellence

Japan Air Filter (JAF) was founded after its founder, Mr. Takeo Watanabe, was inspired by the air conditioning and air filtration systems he saw in New York City during the 1950s. Since then, JAF has become a global leader in clean air systems, and pioneering in clean room air filtration technology. With over 60 years of experience and expertise, JAF has served industries with different requirements on air quality, such as pharmaceuticals, healthcare, microelectronics, power plants, office buildings and education institute.

Since 2010, JAF has expanded globally with its first overseas operation in Malaysia (JAFM), and sales offices in key markets such as Indonesia, Thailand, Singapore, Australia, Brazil, and China, as well as global distribution to countries like Pakistan, Bangladesh, the Middle East, and Europe.

Delivery of air purification system to the first nuclear power plant in Japan (Mihama Nuclear Power Station) in 1969

Industrial Strength Air Filtration for Commercial Spaces

In 2020, JAF has leveraged its strength in engineering capability, by developing V-Guard air filtration series for commercial spaces and application, to combat the outbreak of Covid-19.

V-Guard air filtration series is developed with stringent engineering requirement. This series features Virus Guard HEPA filters that can inactivate 99.99% of viruses, providing full protection for human health. With 12-inch HEPA filter featured in this series, JAF is bringing industrial strength air filtration to commercial spaces. It has served hospital covid isolation rooms in several countries with its negative pressure application and even extended to other business segments such as veterinary hospital, retail shops, confinement centres and restaurants.

TMI 0909-06	52.2	52.2	15	10	402*402*228

APPLICATIONS:

For use in connecting machinery in processing plants and areas subject to sparks, heat and environments where extreme hazards may cause damage to cables. The PVC Coating offers an IP65 rating when used in conjunction with our Galvanise Flexi-Conduit connectors.

CONSTRUCTION:

Galvanised metal conduit with a flame retardant, low smoke zero halogen PVC cover suitable for transit and transportation systems. Corrosion, abrasion, oil and water resistant. High flexibility.

PRODUCT FEATURES:

- > High mechanical strength
- > Superior oil, grease and weather resistant

TMI METAL CONDUIT SYSTEMS

Liquid Tight Connector Straight Type

Material: Zinc, PVC, Rubber
Processing: Die Cast
Usage: Flexible conduit to adapter Box

CAT#	SIZE	d1(mm)	d2(mm)	L(mm)	WEIGHT(g)

NIKKON[®]

DESIGN A SECURE, SUSTAINABLE AND RESILIENT CITY WITH iLCS.

Our iLCS is to incorporate energy-efficient lighting such as LED lights across the city. Additional functions such as motion sensors, monitoring and optimizing the maintenance schedule to ensure that the lights are only lit when required and dimmable controls to further reduce energy consumption. iLCS provides real-time data about energy consumption, carbon footprint and other sustainability metrics and promote citizen participation in achieving sustainability goals.

Software Control

Operator able to control & monitor lights individually through software installed into computer.

Light Control Unit (LCU NEMA)

Compatible with either NEMA or Zhaga socket ready to establish a smart city neural infrastructure network.

Data Control Unit (DCU)

Monitors, controls & manages all connected LCUs. It also functions as the gateway for the connected LCUs to the IT world.

Cloud Vision

Cloud based on platform for real time control of luminaires, real time monitoring of load & lighting levels.

RA365 GEN 2

GRUPPE LIGHTING SOLUTION SDN BHD

CREATING LIGHTING IMAGE & DEVELOPING SUSTAINABILITY

Gruppe Speciality : 6 Environmental Sectors

Gruppe manufacturing facilities of 7,000 sqm side by side, we are ready to deliver globally.

Certifications:

Circular & Sustainability and ESG (Environmental, Social, Governance)

Gruppe support a completely circular economy and environmentally friendly products. Our products begin their lives from raw materials before going through design, production, application, services, end-of-life, and recycling. This lessens waste, including e-waste, a crucial component of our objective to create a circular economy and sustainably produce products in line with ESG (Environmental, Social and Governance).

- Gruppe offers 5 years WARRANTY
- Product service after warranty
- Application services

| Prihoda Malaysia

ENERGY SAVING

Majority chunks of energy consumption for a building comes from the use of air conditioning system. Why spend more on air conditioning system that are less efficient, when you can have a system that are 25% more efficient.

Prihoda Fabric Ducting is designed to provide uniform air dispersion through a combination of air-porous fabrics, nozzles and permeable fabric. This method has a positive impact on energy costs as these systems cool spaces faster and more uniformly to achieve temperature set points. The result is reduced mechanical equipment runtime.

PRIHODA FABRIC DUCTING

- More **EFFICIENT** than conventional duct
- Save **INSTALLATION** time
- Save **OPERATION** cost
- LIGHTER** than conventional duct
- Free **CONDENSATION**
- 20 YEAR** warranty from manufacturer

Tonn Cable Sdn. Bhd. incorporated in 2002 and located in Gerbang, Selangor – 40km from Kuala Lumpur, Malaysia. Tonn Cable is one of the fastest growing Low Voltage (LV) power cable manufacturers in Malaysia. Within a short period of time, it has gained recognition for providing products of superior quality, excellent customer service and reliable after sales support.

Tonn Cable is ISO 9001:2015 accredited for its Quality Management System by SIRIM of Malaysia. Backed by advanced machinery, facilities and technology, we manufacture products that are tested and awarded the Product Certificate Scheme by SIRIM, ISO 500 PIA of Singapore and SRI of Indonesia. Additionally, our products are listed with Fire and Rescue Department of Malaysia (SCARSA), Brunei Department of Electrical Services (DEES), MAMBA Raja Rava (Public Works Department of Malaysia) and Suruhanjaya Tenaga (Energy Commission of Malaysia). The company won the prestigious Malaysia 50 Enterprise Award twice in 2007 and 2017. We strive to improve the quality of our products continuously through research and development.

VISION

To be the leading power cable manufacturers in 2025.

MISSION

To produce world's class quality brand power cable with competitive selling price.

Dynamic Traffic System Sdn Bhd is a privately owned Malaysian which focuses on and is committed to the development of traffic light products.

Established in 2012 as a design and manufacturing company, Dynamic Traffic System Sdn Bhd started to pick up on Traffic Light products and system as its core specialty. The company was accepted to supply traffic light controller in 2012, and has since taken the opportunity to further expand towards producing high quality products such as Traffic Light Controller, Internet of Things (IOT), RF Greenwave Link, RF Countdown and many more under its own name. Currently more than 1000 traffic light controller was installed nationwide.

Our deep experience gives us a clear and confident vision to help clients navigate the future. The dedication to becoming a trusted brand locally, Dynamic Traffic System Sdn Bhd is committed to deliver highly efficient traffic system for benefit of customer and public.

Our extensive partner network helps us drive collaboration and leverage technology independence.

THE ROAD TO SUCCESS

Our range of road machinery combines the heritage of the Ingersoll Rand and ABG brands with the engineering excellence of Volvo. The result is a line-up of Volvo pavers and compactors which achieve an unrivalled level of quality, in both paving and compaction applications. Building on our proud history, we continue to innovate our products to offer customers the best solutions for their operation. Our Compact Assist and Pave Assist products are just two examples of how we are developing intelligent solutions to ensure our machines deliver world-class performance and results long into the future.

**CONCRETE
CANVAS®**

CCX
Innovation on a Roll

GCCM CONCRETE CANVAS

Concrete Canvas® is part of a revolutionary new class of construction materials called Geosynthetic Cementitious Composite Mats (GCCMs) which replace conventional concrete in erosion control applications. It is a flexible, concrete filled geotextile that hardens on hydration to form a thin, durable and water proof concrete layer. CC consists of geosynthetic fibrous top surface and a 3 dimensional fibre matrix filled with a specially formulated dry concrete mix covering an intergral PVC backing layer. CC is hydrated either by spraying or by being fully immersed in water and 24 hours later, the material has set and is ready for use. Once set, the fibres reinforce the concrete, preventing crack propagation and providing a safe plastic failure mode.

GCCM/Bs CCX

CCX™ is part of a revolutionary class of construction materials called Geosynthetic Cementitious Composite Mats and Barriers (GCCM/Bs). It is a flexible, concrete filled geosynthetic, that hardens on hydration to form a thin, durable, water proof concrete layer. CCX™ consists of two interconnected layers of geotextile that encapsulate a specially formulated dry concrete mix. An LLDPE geomembrane backing ensures the material has very high impermeability. CCX™ can be hydrated either by spraying or by being fully immersed in water. Two variants of CCX™ are currently available: CCX-MAT™ (CCX-M™) for erosion control applications & CCX-BARRIER™ (CCX-B™) for containment critical applications. CCX™ products exceed the minimum requirements of ASTM D8364 Standard Specification for GCCM Materials.

The Ultimate Cooling Machine

Genius Cooling Towers is wholly committed to provide high quality product for total customer satisfaction through continuous product innovation. Genius group is involved in design, manufacture, and installation of various type of cooling tower. Genius provides solution in cooling tower industry with series of product, low noise series, super low noise, compact design for space limitation, high temperature application, dirty water application, etc. We strongly recognize the importance of after sales service. We manufacture and supply various spare parts for after sales replacement market.

**QUALITY READY MIXED CONCRETE WITH MORE THAN
30 YEARS OF EXPERIENCE**

Mega Kabel Sdn Bhd was established in 1990 specifically to produce a range of effective low voltage cables for various applications. A member of the Malaysia Cable Manufacturers Association (MCMA), Mega Kabel is now firmly entrenched in the 1 KV-and-below sector of the industry. The company maintains a policy of strategic enlargement and diversification while still leveraging its strengths in core competencies. As a result, Mega Kabel has gained a strong foothold in the development in new areas in wholesaler markets in Asia and Europe.

The Philosophy Behind the Success

Since Mega Kabel specializes in low voltage applications, its business model benefits from a streamlined approach to management and operations. While its Senior Management keeps a progressive, forward-looking radar on trends and developments in the industry, its Production Division is able to run on an efficient and smooth schedule.

Mega Kabel prides itself on being flawless, fast and flexible. Through experience and planning, it is able to deliver both huge and small quantities of cable to specification, at the most competitive price, well within lead times.

PRODUCTS RANGE

A Proven Product Range

Mega Kabel's product lines cover, among others:

Main Wiring Cables

- PVC Insulated, Non Sheathed Cables (PVC)
- PVC Insulated, PVC Sheathed Cables (PVC/PVC)
- XLPE Insulated, PVC Sheathed Cables (XLPE/PVC)

Multi-Core Unarmoured Cables

- PVC Insulated, PVC Sheathed Cables (PVC/PVC)
- PVC Insulated, PVC Sheathed Auxiliary Cables (PVC/SWA/PVC)
- XLPE Insulated, PVC Sheathed Cables (XLPE/PVC)

Armoured Cables

- PVC Insulated, PVC Sheathed Armoured Cables (PVC/SWA/PVC)
- PVC Insulated, PVC Sheathed Armoured Auxiliary Cables (PVC/SWA/PVC)
- XLPE Insulated, PVC Sheathed Armoured Cables (XLPE/SWA/PVC)
- XLPE Insulated, PVC Sheathed Armoured Cables (XLPE/AWA/PVC)

Construction industry is an important industry worldwide. The construction industry generally defined as a sector of the economy. The Industry is playing an important role in economic growth of the country, but it faces many challenges currently that lead to affect project goal and steady growth of the economy.

Construction is a high hazard industry which comprises a wide range of activities involving plans, design, constructs, alteration, maintains, repairs and eventually demolishes of buildings, civil engineering works, mechanical and electrical engineering and other similar works.

The CONSTRUCTION industry is a vast and sprawling field that evolves alongside society.

The more society grows and innovates, the more the construction industry will follow.

Ever since the time of the pyramids, the construction industry has been growing to reach where it is today.

We have come a long way from the steam engine, now utilizing advanced technology like drones for efficient completion and project closeout.

CONCRETE has been used for some of the most famous structures like the Roman Pantheon. In fact, the Ancient Romans created their own special concrete that we're barely learning the ingredients to (the secret ingredients are lime, seawater, and volcanic ash!)

ADVANCED CLARITY HECTARES SDN BHD

Green & Sustainable Technologist cum Valued Engineering Provider

Advanced Clarity Hectares Sdn Bhd has relentlessly pursue innovative, green and sustainable technologies' related research and development (R&D) in civil engineering particularly in areas of soft ground, highway, earth retaining and coastal protection engineering. The Company has managed to secure and implement a number of unique and yet innovative infrastructural projects since 1996 and gratefully all have accorded with thorough success while a wealth of invaluable experience being accumulated.

The company always pursues the vision of being a valued engineering provider for its clients and uncompromisingly indulged in **green and sustainable technologies** that always show friendliness towards our environment. The R&D efforts have paid off handsomely through the development of a number of proprietary products/systems and methods of construction. To name a few GEOBAMTILE for very deep soft ground treatment, ChemSoilBinder™ (CSB™) for effective and economical ground treatment and EA Annular Wall for economic tall earth retaining wall and river bank protection. Effective

solutions, with great time and cost savings plus our unceasing capabilities in exploring and developing innovative technologies have brought forth the creative technical capability the company can offer to varied infrastructural projects ranging from soft ground treatment to slope, river bank and coastal protection against erosion cum accretion concurrently.

These specialties have shaped Advanced Clarity Hectares into a progressive and successful company; an indisputable fact that has been reaffirmed by the recognition given by governmental authorities as well private sectors being a noticeable

Value-added Technologies Provider cum a **1-Stop Centre** for the engineering fields concerned

Leveraging on the expertise and strong track records, we continue to pursue new horizons, seeking more business opportunities far and wide while belief in synergizing with other contemporaries who share the same mission, vision and passion. Advanced Clarity Hectares has embraced the future with a firm commitment to further progressive growth by building on the Company's strengths

and success to further expand existing core businesses, taking advantage of business opportunities in a rapidly changing market both nationally and internationally.

Advanced Clarity Hectares's humble quality objective is simply:

“To exceed the client's expectations in all aspects and every time”

We shall ensure business management, design and construction, testing and inspection activities undertaken on all projects are:

COMPANY BACKGROUND

Urusan Teknologi Wawasan Sdn Bhd (UTW) is a facility management Bumiputra company under Malaysia Airports Holdings Berhad group. Certified with the ISO 9001 Quality Management System, UTW has a proven track record in the facility management industry.

Its experienced personnel provides clients with technologically advanced service standard quality, offering a wide range of services. The services UTW offers include facilities & infrastructure maintenance, security, car park management, cleaning, pest controls, facility consultancy, and many more.

Over the years, UTW has provided facility maintenance services to prestigious organizations from various industries including the transportation hub, shopping mall, manufacturing plant and racing circuit.

UTW has achieved 5-star under CIDB's SME Competitiveness Rating for Enhancement (SCORE) since 2017.

STRUCTURE

Our organization is designed to be responsive to customer requirements, manned by highly qualified and competent personnel supported by our human capital development policy.

TECHNOLOGY

Our services is advanced by the Smart Asset Management Solutions (SAMs) enabling the company to facilitate the Total Facility Management strategic & technical planning operation.

UTW CUSTOMER FOCUS

SYSTEM

UTW is certified with ISO 9001 Quality Management System (QMS), ISO 14001 Environmental Management System and ISO 45001 Occupational Health & Safety Management System

PEOPLE

More than 1,000 trained & qualified workforce to provide superior maintenance and management services.

*Company***SERVICES & PRODUCTS**

Diversify its services & products through comprehensive competency capability development and the ability to offer Integrated Facility Management (IFM) services uniquely designed to meet each client's expectations.

Integrated Facilities Management Services

- Operation & Maintenance (O&M) for Mechanical & Electrical, Civil & Structure System
- Cleaning Services
- Landscaping Services
- Car Park Management
- Security Management System
- Energy Management
- Vibration Analysis (VBA)
- Infra Red Thermography
- Refurbishment Works
- Energy Efficiency Renewable Energy (EERE)
- Upgrading Works
- Building Management System (BMS)
- Testing and Commissioning

Our Vision

Leading World-Class Total Facilities Management Services and Engineering Solution Provider.

Our Mission

To deliver highest standards of performance in Facilities Management services and Engineering solutions to our clients by providing quality and efficient services.

**Facility Consultancy & Advisory Services**

- Certified Competent /Service Engineer Services
- Supervision of Third Party Contractors
- Energy Audit
- Energy Efficiency Program
- Performance Contracting
- Renewable Energy & Co-generation
- Project Management Services

“Consultant” is defined as a person or company, which under an agreement other than an employment agreement, provides expert or strategic advice and related services for consideration and decision-making. The key words in this definition are ‘expert’ and ‘strategic’.

A “Non-Consulting Service Provider” (i.e. Professional Services) is defined as a person or company who is contracted to provide tactical or operational services.

Management consultants solve large, hairy, complicated problems for organizations. Management consultants are professional experts who provide solutions and strategies to improve the financial and operational health of an organization. The recommendations made by management consultants are backed by large amounts of research and data.

Clients hire management consultants primarily as objective third-party analyzers of an organization, including businesses, government institutions, nonprofits, and more. Oftentimes, organizations can become so engrossed in their own biases and perspectives that they can lose the objectivity needed to make the best strategic and operational decisions.
